Health Care Financing Program Statistics

The Health Care Financing Administration was established to combine health financing and quality assurance programs into a single agency. HCFA is responsible for the Medicare program, Federal participation in the Medicaid program, and a variety of health care quality assurance programs. The mission of the Health Care Financing Administration is to promote the timely and economic delivery of appropriate, quality health care to its beneficiaries — approximately 49 million of the nation's aged, disabled, and poor.

HCFA's Office of Research and Demonstrations (ORD) conducts studies and projects that demonstrate and evaluate optional reimbursement, coverage, eligibility, and management alternatives to the present Federal programs. ORD also assesses the impact of HCFA programs on health care costs, program expenditures, beneficiary access to services, health care providers, and the health care industry.

Medicare *Program Statistics* present detailed reports on Medicare enrollment, providers, and the use of reimbursement for covered services. Medicare enrollment data report the number of persons insured under Part A and Part B of the Medicare program by age, race, sex, and place of residence. Provider statistics consist of information on the number, distribution, and characteristics of hospitals, skilled nursing facilities, home health agencies, and independent laboratories certified to furnish and receive payment for covered health services to Medicare beneficiaries.

Foreword

This report contains information on reimbursement for services used by Medicare beneficiaries. It profiles amounts reimbursed, services paid for, and variations in use and reimbursement by age, race, sex, and places of residence of the beneficiaries. Such data illustrate the patterns of use of Medicare benefits by persons age 65 and over and by disabled beneficiaries.

The general tables in the report show reimbursement for services used by beneficiaries in 1976, 1977, and 1978, by State of residence and by age, race, and sex.

Introduction

Purpose and Scope of Report

This report presents data on the use of Medicare-financed medical services by aged and disabled enrollees for the years 1976 through 1978. It continues the series which began in 1966, the first year of the program.[1] The report discusses the number of aged and disabled persons enrolled for Medicare, the number and characteristics of the enrollees for whom the program made reimbursements, and the amounts reimbursed by the program and the way these reimbursements were distributed. The distributions of Medicare reimbursements are shown by type of service and demographic groups.

The remainder of this introduction discusses the organization of the report and describes the sources of the data used, the benefits available under the program, and the methods used to compare and contrast the use of Medicare benefits by the different groups of enrollees. The introductory section concludes with highlights of the use of the basic services covered by the Medicare program. The second section, Medicare Trends: 1967-1978, illustrates the significant trends during the program's history. Trends are examined in terms of the characteristics of the persons enrolled in the program, the way program benefits are distributed to different groups of enrollees, and the amounts reimbursed for the services covered by the program. This section is intended to alert administrators, planners, and legislators to some implications of these trends.

The trends examined in the second section cover the period from 1967 (the first full year of the program) through 1978. Specific attention is given separately to the aged and the disabled enrollee groups. The aged (that is, persons 65 years of age and over) have been covered since the beginning of the program and trend data for the aged covers the entire period from 1967 to 1978. Medicare coverage was extended to the disabled by the Social Security Amendments of 1972 (P.L. 92-603). Although this coverage began in July 1973, the discussions pertaining to the disabled cover the period from 1974 (the first full year of coverage) through 1978.[2]

The third section, Impact on the Beneficiary, examines the contribution of the Medicare program to helping the aged meet health care expenditures and to the way that Medicare benefits are distributed among persons receiving reimbursements for services. This section examines the major categories of health care expenditures incurred by the aged and the contribution made by Medicare toward helping meet their health care costs. Medicare's contribution is evaluated in relation to other third-party sources of payment, both public and private, and to the direct out-of-pocket payments made by the aged persons themselves. Particular emphasis is given to the burden placed on the private resources of aged persons who need long-term nursing home care. This section concludes with a discussion showing that the major share of the benefits paid by the program is distributed among a small proportion of the enrollees and that this skewed distribution of health care expenditures also characterizes the general population under 65 as a whole.

Data Sources

This report links Medicare reimbursements for principal program benefits to individual groups of program beneficiaries. The data for the aged are obtained from submitted claims for a 5 percent sample of the enrolled population. Data for the disabled represent submitted claims from all disabled beneficiaries. Data covering the years 1976 through 1978 shown in the general tables were obtained from claims processed through the 12 months following the end of the year; for example, the data for services rendered in 1978 were based on claims for payment processed through December 1979.

Data used in this report are from the Medicare statistical system (MSS), which is a by-product of the administrative record system employed by the Health Care Financing Administration (HCFA) in support of the bill payment process. Data on services are linked to individuals by the use of the health insurance claim number. Because the data used to prepare this report are person-based, analysis of numerous age, race, and sex cohorts was possible. Diagnostic and surgical procedure data are not contained in the summary statistics. This report does not discuss the use of services not covered by Medicare nor the relationship of service use to individual income, employment, or health status because such information is not gathered by the Medicare statistical system. Wherever possible, survey data is referenced to augment Medicare statistics.

---

[1]Reports covering the following years have been published: 1966, 1967, 1968, 1969, 1973-74, and 1975. Data processing difficulties prevented the preparation of the reports for the years 1970 through 1972.

[2]Due to irregularities in the data, it was not possible to separate those disabled enrollees with ESRD from those without ESRD. A discussion of these two groups is included in "Medicare: Health Insurance for the Aged and Disabled, 1975. Summary: Utilization and Reimbursement by Person," by Martin Ruther, March 1981. A more detailed report on the use of services and reimbursement for services by the ESRD population is being prepared by the Office of Research, Health Care Financing Administration.

Program Benefits

Medicare provides services to its enrollees under two complementary health insurance programs: Hospital insurance (HI) and supplementary medical insurance (SMI). The HI program pays, subject to deductible and coinsurance provisions, part of the cost of hospital and certain post-hospital services: skilled nursing facility (SNF) care and home health agency (HHA) care. The HI program is financed through a tax on current earnings in employment covered under the Social Security Act. The SMI program, also subject to cost-sharing provisions, reimburses for physicians', out-patient, and related home health agency services. The Medicare program does not cover routine eye and dental care, ambulatory drugs, preventive services, or long-term nursing home care.[3] Participation in SMI is voluntary and it entails a monthly premium ($8.20 per month in 1978). This monthly premium together with a Federal contribution from general revenues and interest earned on the SMI trust funds finance SMI.

Measures and Methods of Comparison

In this report, five statistical measures are employed to describe the use of Medicare benefits by program enrollees. Two of these measures—total persons served and total amounts reimbursed—emphasize the magnitude of the program. The other three measures, persons served per 1,000 enrolled, reimbursement per person served, and reimbursement per enrollee, are rates which highlight use patterns and serve to show how enrollee groups differ in the relative use of Medicare benefits. These measures and their relationships to each other are central to the development of this report. Relevant definitions are thus provided.

Persons Served (Users): The Medicare enrollees who incurred covered charges that exceeded the applicable Medicare deductibles and received reimbursement for services from Medicare.

Reimbursement: The amounts paid by Medicare to, or on behalf of, insured persons for services covered by the program.[4]

Persons Served Per 1,000 Enrolled: The number of persons reimbursed for Medicare services per 1,000 enrollees. This ratio is a measure of the proportion of members of specific enrollee groups who receive some Medicare reimbursement for specified services and is referred to as the "user rate." It is the proportion of Medicare enrollees who have exceeded the applicable Medicare deductible and received services for which Medicare made reimbursements. Persons who used covered services, but who either did not exceed the deductible or failed to submit claims are excluded from the count of users. Most users of HI short-stay hospital inpatient care meet the deductible because the deductible is approximately equal to the average cost of one day's care in a hospital. Most short-stay hospital stays are either for more than one day or the hospital's per diem charges are higher than average hospital per diem costs. Many users of SMI covered services, however, never meet the deductible. Thus, persons served under SMI as defined here are fewer than the number of persons actually using SMI covered services.

Reimbursement Per Person Served: This is the amount of money reimbursed per person who exceeded the applicable Medicare deductible. This measure indicates the extent to which persons receive reimbursement after meeting cost-sharing requirements.

Reimbursement Per Enrollee: This measure is the product of the proportion of enrollees for whom the program made reimbursements and the amount reimbursed per person served. It can be considered as a measure of equity in the distribution of Medicare benefits across enrollee groups.

The text presents these measures for specific Medicare program benefits by enrollee characteristics. This presentation makes possible the analysis of relative use across program components (for example, the proportion of Medicare enrollees who use inpatient hospital services compared to the proportion of Medicare enrollees who use skilled nursing facilities), and across enrollee subgroups (for example, whites compared to all other races). The measures are also presented in time series to show how the program has grown and how the use of program benefits has changed over time.

Inpatient hospital analyses are augmented with discussions of short-stay hospital discharge rates, average length of stay, and days-of-care rates derived from reports from the Medicare statistical system. These variables make possible the study of changes in hospital use over time and demographic characteristics.

Highlights

Enrollment

The aged Medicare population has been expanding at about 2 percent per year and is growing more elderly. There were 24.4 million aged enrollees in 1978 with an average age of 73.0 years and representing 89.7 percent of the Medicare enrollee population. Actuarial projections indicate that the aged Medicare population will continue to expand so that by the year 2020 it will represent 15.6 percent of the United States population.

[3]For more information concerning the program benefits, see Provisions of the Law and Regulations in Appendix C in this report.

[4]This figure does not include money paid on behalf of those aged or disabled enrollees who were members of Health Maintenance Organizations (HMOs) or Group Practice Prepayment Plans (GPPPs). In 1978, there were 308,059 aged and 12,653 disabled persons enrolled in GPPPs and HMOs, accounting for $97 million in SMI reimbursements.

The aged Medicare population is becoming progressively more female, more representative of minority groups, and more heavily concentrated in the South. The increasing size and the aging of the Medicare aged population will tend to increase the relative burden of medical care expenditures for the aged on the remainder of society.

The disabled population (2.8 million individuals as of 1978) is becoming an increasingly larger component of the program, growing from 8.0 percent in 1974 to 10.3 percent of Medicare enrollees in 1978. The most costly of the disabled, those with end-stage renal disease (0.2 percent of Medicare enrollees) is also the fastest growing. The disabled enrollee population, as might be expected, incurs great expenses for medical services, is predominantly male, and disproportionately black.[5]

Reimbursements

The Medicare program is primarily a hospital insurance program with (as of 1978) inpatient hospital reimbursements representing 67.9 percent of all Medicare reimbursements; physician reimbursements, 23.7 percent; outpatient reimbursements, 5.3 percent; home health agency reimbursements, 1.8 percent; and skilled nursing facility reimbursements, 1.3 percent.

Since 1973, reimbursements for outpatient and HHA services showed the largest rates of increase. The rate of increase in reimbursements for SNF services was the lowest among Medicare benefits. Because of this, SNF benefits have been taking a decreasing share of the Medicare dollar. The days of short-stay hospital care per 1,000 Medicare enrollees have remained relatively stable since 1971, reflecting offsetting increases in the discharge rate and decreases in the average length of stay. Reimbursements per covered day, however, increased at an average rate of about 13.4 percent per year between 1967 and 1978.

Medicare reimbursements (over $27 billion in 1978) grew at an average 18.4 percent per year since 1967. Increases in total reimbursements have been affected by changes in enrollment, persons served per 1,000 enrolled, and reimbursement per person served. For the aged, increasing reimbursements per person served has been the most influential factor, especially since 1973 when the rate of increase in reimbursements for the aged accelerated. The disabled, however, have shown a higher rate of increase in total reimbursements than have aged enrollees because rising reimbursements per person served was coupled with a rapid rate of growth in the number of disabled enrollees.

[5]The vast majority of the disabled population qualified for the Medicare program as disabled workers with sufficient quarters of coverage under Social Security. Historically, men have represented a higher proportion of the labor force than have women. The cumulative effect of this resulted in the current predominance of men in the disabled Medicare population. In 1978, 63.1 percent of the disabled Medicare population was male, compared with 49.6 percent of the total population under age 65. The discrepancy by race was not as great. Black enrollees comprised 14.5 percent of the disabled Medicare population, compared with 12.1 percent of the under 65 population as a whole. (Data are from unpublished enrollment data generated by the Medicare statistical system and from *Statistical Abstract of the United States, 1979.)*

Distribution of Medicare Reimbursements

Medicare reimbursements are becoming more evenly distributed across racial groups. However reimbursements were higher for aged male enrollees, disabled beneficiaries (especially ESRD patients), and those living in the West and Northeast. While increasing age influences reimbursements for the elderly, no age effect is noted for the disabled.

The vast majority of reimbursements were used by a small proportion of enrollees who were either chronically ill or in the last year of life. In 1978, 15.0 percent of all Medicare users received reimbursements of $3,000 or more which accounted for 71.1 percent of total reimbursements. Conversely, 60.4 percent of the users received less than $500 in reimbursements which accounted for only 5.2 percent of total reimbursements. This skewed use of medical resources also characterizes the general population under 65 as a whole.

Medicare as a Resource for Meeting the Medical Expenses of the Aged

The aged population incurred approximately $43 billion in health care expenditures in 1977, a *per capita* amount of $1,821. The Medicare program was the largest single contributor toward meeting those expenses, accounting for approximately 44 percent of payments for health care services. However, direct out-of-pocket payments still proved significant, as 29.1 percent of payments ($698 per capita) were the result of payments from individual or family sources.

The expenditures for nursing home services represent the largest burden on the private resources of the aged and their families as approximately one half of nursing home expenditures are met by out-of-pocket expenditures.

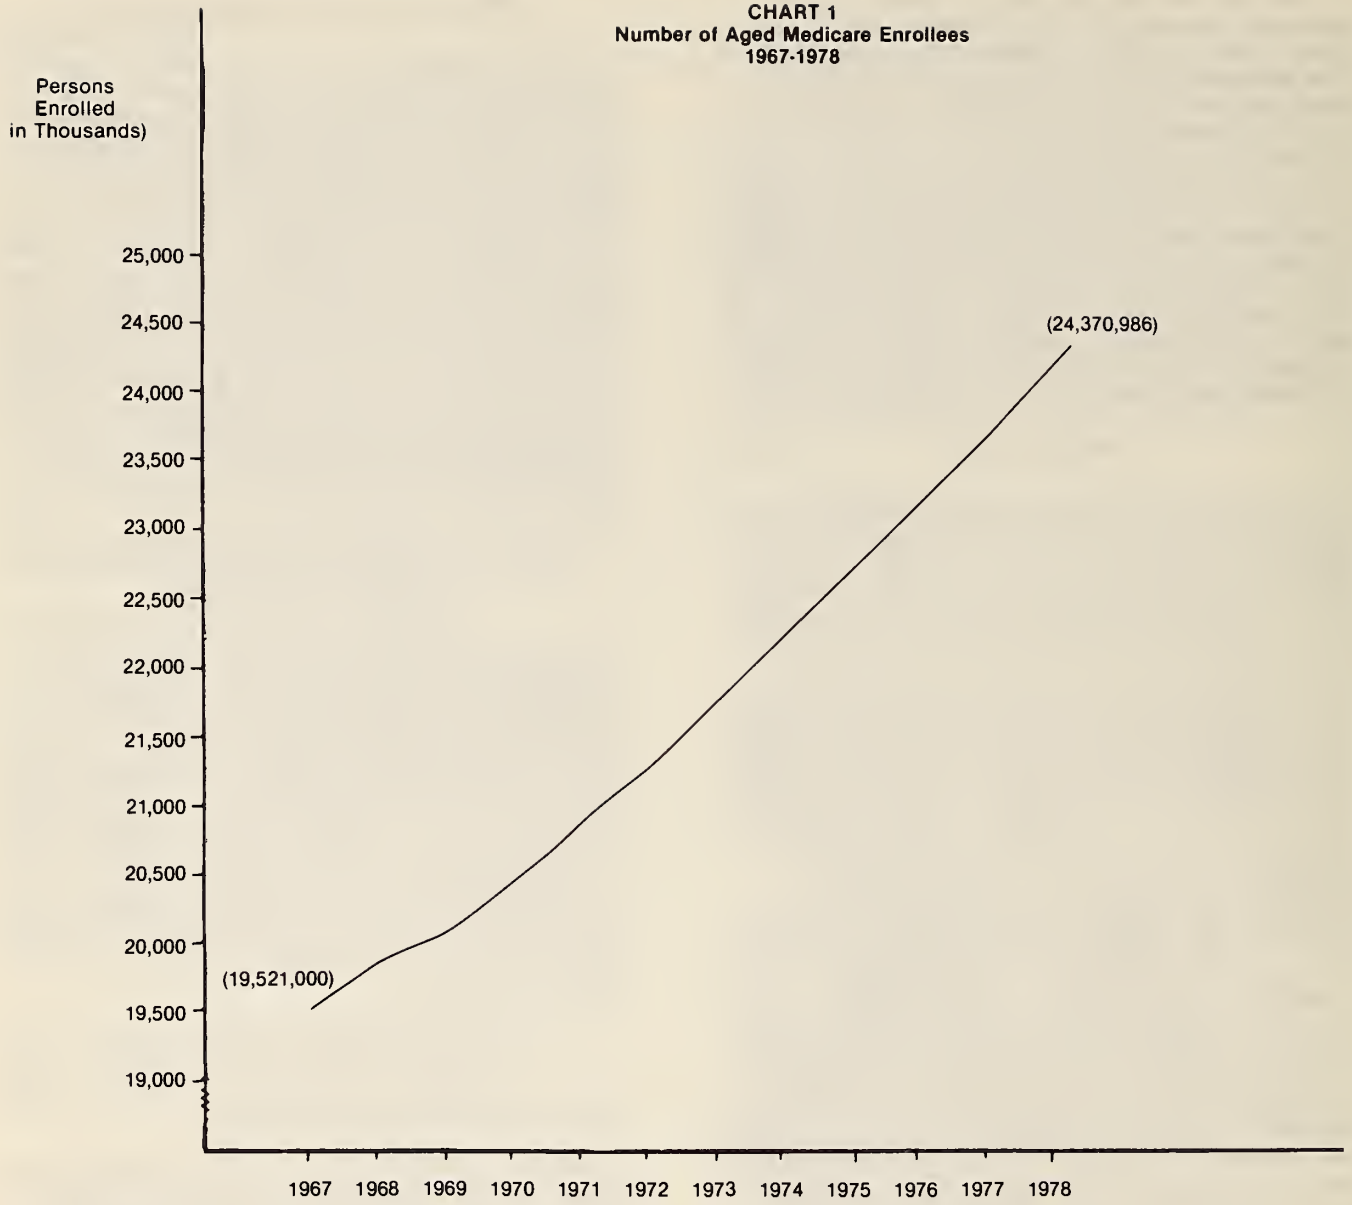
Medicare Trends: 1967-1978

Medicare Enrollee Characteristics

At its inception on July 1, 1966, the Medicare program primarily was designed to serve an aged population. On July 1, 1967, there were 19.5 million aged Medicare enrollees. This number increased to 24.4 million by July 1, 1978, representing an average increase of 2 percent per year (Chart 1).

The aged are a growing portion of the population in this country. In 1967, the percentage of the United States population who were age 65 or over was about 10 percent. By 1978, this percentage rose to 11 percent. Census Bureau projections indicate that this percentage could increase to approximately 12.2 percent (32 million) by the turn of the century. Children born during the post World War II "baby boom" will reach age 65 soon afterwards. As a result, by 2020, it is estimated that 15.6 percent of the nation's population (45 million) will be age 65 or over (U.S. Bureau of the Census). Therefore, aged Medicare enrollees will continue to increase at a greater rate than the U.S. population as a whole.

CHART 1
Number of Aged Medicare Enrollees
1967-1978



In addition to its numeric growth, there has been, and will continue to be, an aging of the population age 65 and over. Nearly 38 percent of the aged were 75 and over in 1967, a figure which increased to over 40 percent by 1978.[6] This group is expected to comprise nearly half of the aged population by the year 2000. The aging of the population becomes more dramatic when examining the percentage of enrollees age 85 and over. In 1967, 6.5 percent of the enrolled Medicare population was age 85 and over. The percentage increased to 9 percent by 1978 and is pro-jected to be nearly 15 percent by the turn of the century.

This aging of elderly Medicare enrollees has implications for the program as a whole. As will be seen later, use of services and amount of reimbursements increase with advancing age. A larger and older Medicare population will have a compound impact on the program. Not only will its size increase, but the *per capita* use and costs of services will increase as well. Thus, the Medicare program as currently structured will require an increasing share of the national income.

The aged Medicare enrollee population is also becoming proportionately more female (57.7 percent in 1967 and 59.4 percent in 1978) and more representative of minorities (7.9 percent of the enrollees were non-white in 1967 and 8.7 percent in 1978) (Peterson and Silverman, No. 03065).

In 1978, the Northeast census region represented 24.3 percent of the aged Medicare enrollees living in the U.S., the South 32.2 percent, the North Central 26.9 percent, and the West 16.5 percent. The enrollments in the South and the West showed the most rapid growths during the period 1967 to 1978, which were between 2.7 and 2.8 percent per year.

The ratio of aged SMI to HI enrollees increased between 1967 and 1978. As of July 1, 1967, about 92 percent of the HI enrollees (19.5 million) were enrolled for SMI. By 1978, the percentage of HI enrollees (24.0 million) also enrolled for SMI (23.5 million) increased to 98 percent. A portion of the increase is attributed to the State "buy-in" program whereby the States purchase SMI coverage for HI enrollees who qualify for Medicaid. In 1978, 10.6 percent of the aged SMI enrollees were "buy-ins." In addition, the 1972 amendments provided for automatic enrollment of persons in SMI as they became entitled to hospital insurance unless such enrollment was specifically declined. This became effective July 1, 1973.

The disabled Medicare population has been growing at a faster rate than the aged population. In 1974, the first full year of coverage of the disabled population, there were 1.9 million disabled enrollees representing 8 percent of the total Medicare population. By 1978, there were 2.8 million disabled enrollees representing 10.3 percent of the total. This represents a growth rate of 9.7 percent per year (Chart 2). The most significant fact about the disabled is that while disabled enrollees with end-stage renal disease (ESRD) represented a relatively small percentage of the total disabled population, 0.8 percent (16,222) in 1974, and 1.3 (36,365) percent in 1978, they represented about 26 percent of reimbursements for the disabled.

[6]The median age of aged Medicare HI enrollees was 71.7 in 1967 and 73.0 in 1978.

In contrast to the aged population, disabled Medicare enrollees are predominantly male. In 1978, males (1.8 million) constituted 63.1 percent of all disabled enrollees (2.8 million). Non-whites (0.49 million) were more heavily represented among the disabled living in the U.S. (17.5 percent) than they were in the total population under 65 (about 15.8 percent in 1978) (Peterson and Silverman, No. 03065). Like the aged, more disabled enrollees lived in the South than in any other region. In 1978, 1 million disabled enrollees (37.2 percent of those living in the U.S) lived in the South. Of all persons under 65 in the U.S., about 33 percent lived in the South in 1978.

Reimbursements

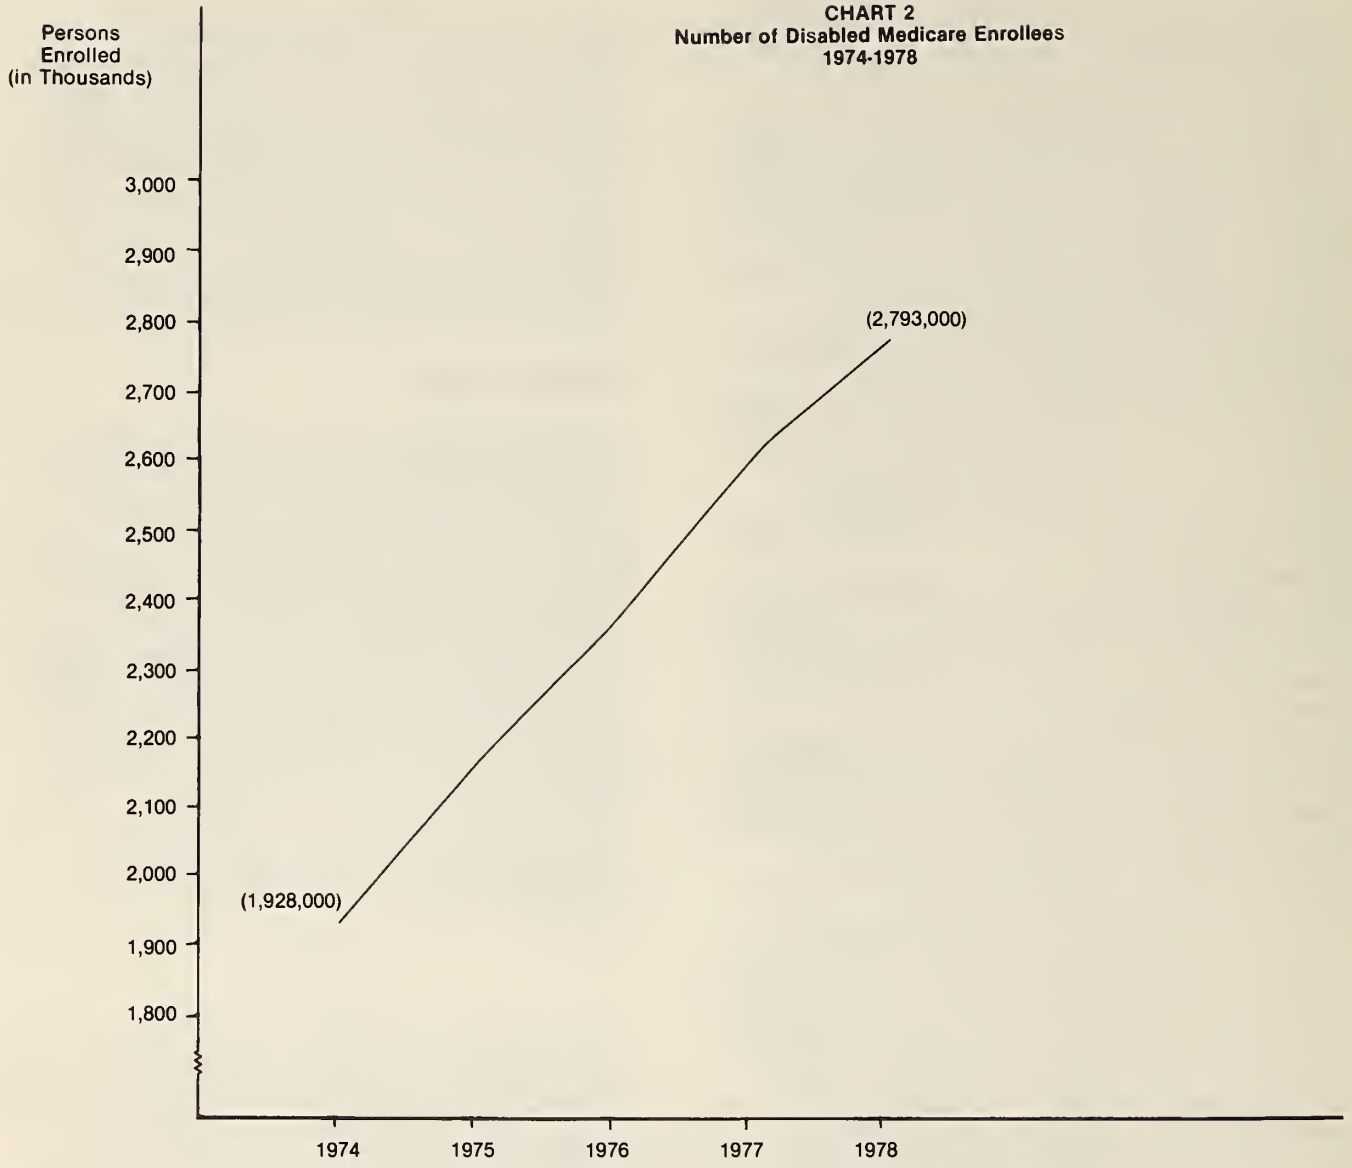
Total reimbursements by the Medicare program increased from $4.2 billion in 1967 to $24.1 billion in 1978. Medicare actuaries project that this figure will rise to $72.9 billion by fiscal year 1985, increasing over 200 percent from the 1978 figure (Medicare Benefit Estimates, 1981 Budget Assumptions). In 1974, the first full year of coverage of the disabled, the disabled accounted for 10.3 percent of the $10.1 billion in total reimbursements. By 1978, this percentage increased to 12.4 percent and represented nearly 3 billion dollars. This percentage is projected by Medicare actuaries to increase to 13.7 percent (representing about $10 billion) by 1985. Thus, reimbursements among the disabled are growing at a faster rate than among the aged.

Since the patterns of growth in reimbursements differed between the aged and disabled, the experiences of these two groups are presented separately.

Aged

Table A presents aged persons served and amounts reimbursed for the period 1967 through 1978. The most important trends illustrated in this table are highlighted and discussed in this section. Among the aged population, total Medicare reimbursements grew from $4.2 billion in 1967 to $21.1 billion in 1978—an average annual increase of 15.7 percent (Table B and Chart 3). Three factors influenced this growth in total reimbursements over this time period. By far the largest contribution to this increase occurred in reimbursements per person served where the rate of growth was 8.5 percent per year. The average annual increase of 8.5 percent in Medicare reimbursements per person served exceeded the increase in the consumer price index (CPI) of 7.4 percent per annum (Statistical Abstract of the United States, 1978). Other factors influencing the growth in total reimbursements were growth in persons served per 1,000 enrolled (4.5 percent per year) and growth in enrollment (2.0 percent per year). Persons served more than doubled

CHART 2
Number of Disabled Medicare Enrollees
1974-1978



during this period, increasing from 7.2 million (367 per 1,000 enrollees) in 1967 to 14.5 million (594 per 1,000) in 1978 (Chart 4). The contribution of each factor to the increase in total reimbursements over the period from 1967 to 1978 was as follows:[7]

Reimbursement per person served	56.7 percent
Persons served per 1,000 enrollees	30.0 percent
Enrollment	13.3 percent

The rate of growth of total reimbursements among the aged has accelerated since 1973. During the period 1967 to 1973, total reimbursements increased at a rate of 12.6 percent per year. This rate of increase rose to 19.5 percent per year over the period 1973 to 1978. In both cases, reimbursement per person served was the dominant factor. In the former period, it accounted for 50.8 percent of the increase in total reimbursements; in the latter period, this contribution rose to 61.6 percent.

Among the aged, the Medicare program as been predominantly an inpatient hospital program (Table B). This is not unexpected since the basic objective of the Medicare program was to help the aged meet the costs of hospital services. These costs have been increasing ever since. In 1967, inpatient hospital services accounted for 62.7 percent of the Medicare payments made on behalf of the aged ($2.7 billion). Reimbursements for these services have grown at a faster rate than the program as a whole, as payments of inpatient hospital services ($14.4 billion) represented 68.5 percent of total payments in 1978. It is projected that by fiscal year 1985, reimbursements for inpatient hospital services ($41.4 billion) will still represent about two-thirds of total reimbursements for the aged (Medicare Benefit Estimates, 1981).

The major portion of these inpatient hospital services were furnished in short-stay hospitals. A summary measure for short-stay hospital use, total days of care (TDOC) per 1,000 enrollees remained relatively stable over the period 1967-1978. This stability masked a rise in the discharge rate (from 268 to 345 per 1,000 HI enrollees) which was offset by a decline in the average length of stay (ALOS) (from 13.1 to 10.6 days). However, all of these measures increased during the first year following the implementation of the Medicare program on July 1, 1966. The discharge rate increased an estimated 4.6 to 7.4 percent, the ALOS increased from 4.1 to 7.8 percent, and the TDOC rate about 8.9 to 16.0 percent from the levels prevailing prior to the start of the Medicare program (Pettengill, 1972). Recent trend data indicate that while the decline in ALOS is slowing, the discharge rate continues to climb (Goldsteen, 1978). Thus, the TDOC rate may begin to increase.

While the TDOC rate, for the aged was relatively stable, reimbursement per covered day increased from $40 in 1967 to about $164 in 1978—an average annual increase of 14.7 percent. This increase is a result of a "market basket" effect and a change in service intensity (Gibson, 1978; Congressional Budget Office, 1979). The "market basket" refers to the higher prices that hospitals pay for the goods and services used in delivering care, which reflect the impact of inflation. Changing service intensity reflects changes in the amounts and combinations of the relevant production factors (such as adding new services and delivering existing ones more frequently) that go to produce an "average" day of hospital care. Looking at the contribution of these factors over the period 1968 to 1978, the Congressional Budget Office estimated that the "market basket" effect was responsible for about two-thirds of the increase of the cost of a hospital day, while change in intensity was responsible for the remainder.[8]

Reimbursements for SMI services to the aged exceeded $6 billion in 1978 compared with $1.3 billion in 1967—an average annual increase of 15.2 percent. Reimbursements for SMI services for the aged are projected to exceed $19 billion by fiscal year 1985 (Medicare Benefit Estimates, 1981). Persons served per 1,000 enrollees increased from 365 in 1967 to 607 in 1978—an average annual increase of 4.8 percent. This increase in persons served per 1,000 enrolled reflects the fact that more enrollees were exceeding the SMI deductible in 1978 than in 1967. Though charges for physicians' services, the chief service furnished under SMI, increased at an average annual rate of 7.5 percent (Statistical Abstract of the U.S., 1978), the SMI deductible remained relatively constant during that period. (The SMI deductible, which was $50 in 1967, was increased to $60 in 1973 and has remained at that level since.) Since the number of covered services used per user remained stable, the increase in charges accounted for most of the increased percentage of users exceeding the deductible and the increase in the amounts reimbursed by SMI. In contrast to SMI, the inpatient hospital deductible, has been adjusted annually to reflect the rising cost of one day of hospital care.

Whereas the HI program is largely an inpatient hospital program, the SMI program consists largely of physicians' and other medical services which were used by 96 percent of the aged SMI enrollees served in 1978. Reimbursements for physicians' and other medical services totaled $5.1 billion in 1978 (85 percent of total SMI reimbursements—an average annual increase of nearly 14 percent from $1.2 billion in 1967. Though reimbursements for physicians' services increased at a rapid rate, they comprised a lower percentage of total Medicare reimbursements in 1978 (24.4 percent) than in 1967 (28.9 percent). That was the result of a more rapid rate of increase in reimbursements for other covered services. Outpatient services, one such class of benefits, increased from 0.9 percent ($38 million) in 1967 to 3.8 percent ($798 million) of total Medicare reimbursements in 1978. During that period reimbursements for outpatient benefits increased more rapidly than for any other Medicare benefit, at an average annual rate of almost 32 percent.

---

[7]See Klarman, H. E. *et. al.*, "Sources of Increases in Selected Medical Care Expenditures 1929-1969" DHEW-SSA-ORS. Staff Paper No. 4 April, 1970. The Klarman model utilized here and in other discussions throughout this text partitions the increase in total reimbursement among a number of contributing factors. In this instance, the relevant factors are shown in the following equation:

$$\text{Total Reimbursements} = \frac{\text{Persons Served}}{\text{1,000 Enrolled}} \times \frac{\text{Reimbursement}}{\text{Person Served}} \times \text{Enrollment}$$

Across time, the average annual percent change in total reimbursements equals the sum of the average annual percent change in the terms on the right. In the formula, the "interaction" term is distributed proportionately across the primary factors.

[8]Although the percentages apply to total hospital expenditures, they are indicative of the relative contributions of each of these factors to the increase in Medicare costs.

Outpatient Services	.9	3.8	
Home Health Agency Services	.4	.5	

Skilled nursing facility (SNF) services under Medicare are designed as a post-hospital benefit used when continuous medical care in a hospital is no longer required but the patient is in need of daily skilled nursing or rehabilitation services to continue recovery from the illness for which hospitalization was originally needed or for a condition which arose during hospitalization. They are not intended to provide long-term nursing home care. In the early days of the program, there was a tendency to use SNF services for lower levels of care than intended by the law. In 1969, regulations were issued which defined skilled nursing care more precisely (for further details see Ruther, 1981). This resulted in a sharp decrease in program expenditures for SNF services to the aged. From 1969, when reimbursements for SNF services ($311 million) constituted 5.2 percent of all reimbursements to the aged, program payments for SNF services fell to $166 million in 1971, to 2.3 percent of total Medicare reimbursements. By 1978, SNF reimbursements ($293 million) still had not reached the 1969 level and constituted only 1.4 percent of all reimbursements on behalf of the aged.

The Medicaid program is the primary source of funds for aged persons who are unable to pay for their own long-term care in nursing homes. Medicaid provisions for long-term care services are much more liberal than are Medicare's. In fiscal year 1978, the Medicaid program spent $3.6 billion for skilled nursing and intermediate care services for the aged. Those expenditures constituted 46.7 percent of all Medicaid payments on behalf of persons 65 years or over.

Ever since the Social Security Amendments of 1972, home health agency (HHA) services have been among the fastest growing Medicare benefit among the aged. In 1971, HHA reimbursements ($55 million) constituted 0.8 percent of all Medicare reimbursements. By 1978, HHA reimbursements reached $400 million, but still constituted only 1.9 percent of Medicare reimbursements for the aged.

Since the beginning of the program, HHA visits were limited to 100 per benefit period (under HI) and 100 visits per calendar year (under SMI). Thus, as is generally true of the Medicare benefit structure, HHA services were meant to be used to help the patient recover from an acute episode of illness and not to provide continuing support for the effects of long term disabilities. However, recent legislation has changed this orientation. The Omnibus Reconciliation Act of 1980 (P.L. 96-499) removed the limits on number of HHA visits, eliminated the 3-day prior hospitalization requirement under HI, and removed the application of the SMI deductible to HHA services under SMI. These provisions did not become effective until July 1, 1981, and therefore do not affect the data presented in this report.

CHART 3
Total Reimbursements for Aged Medicare Enrollees
1967-1978

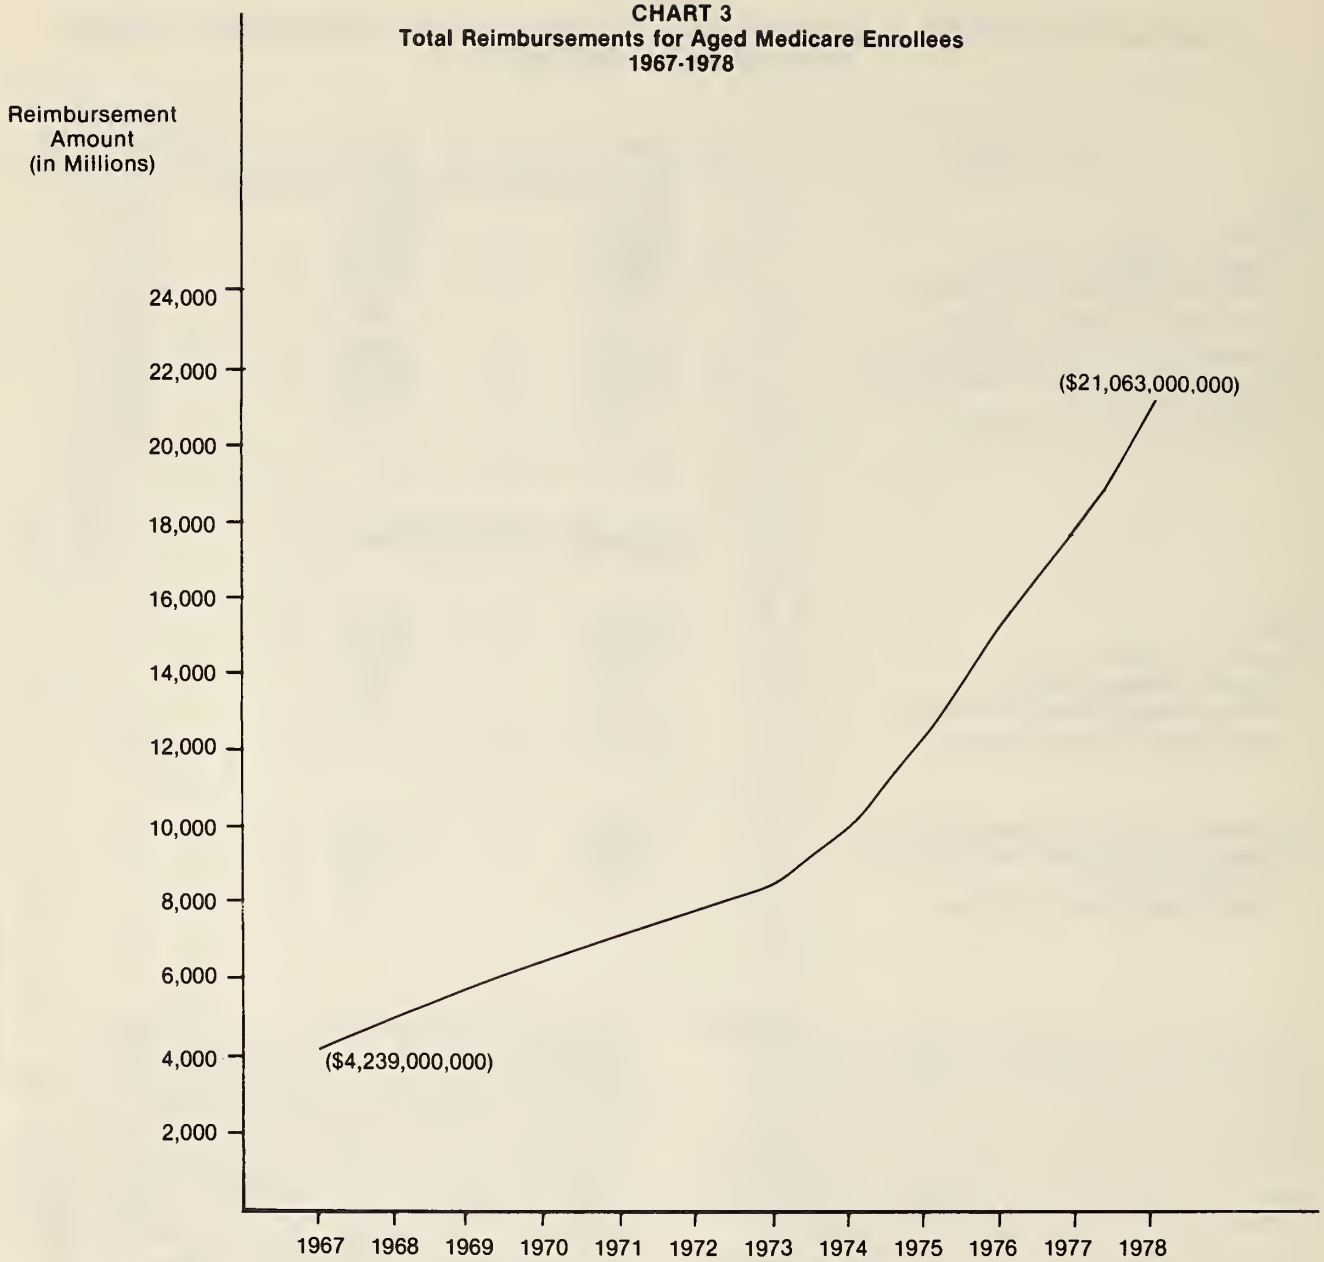

CHART 4
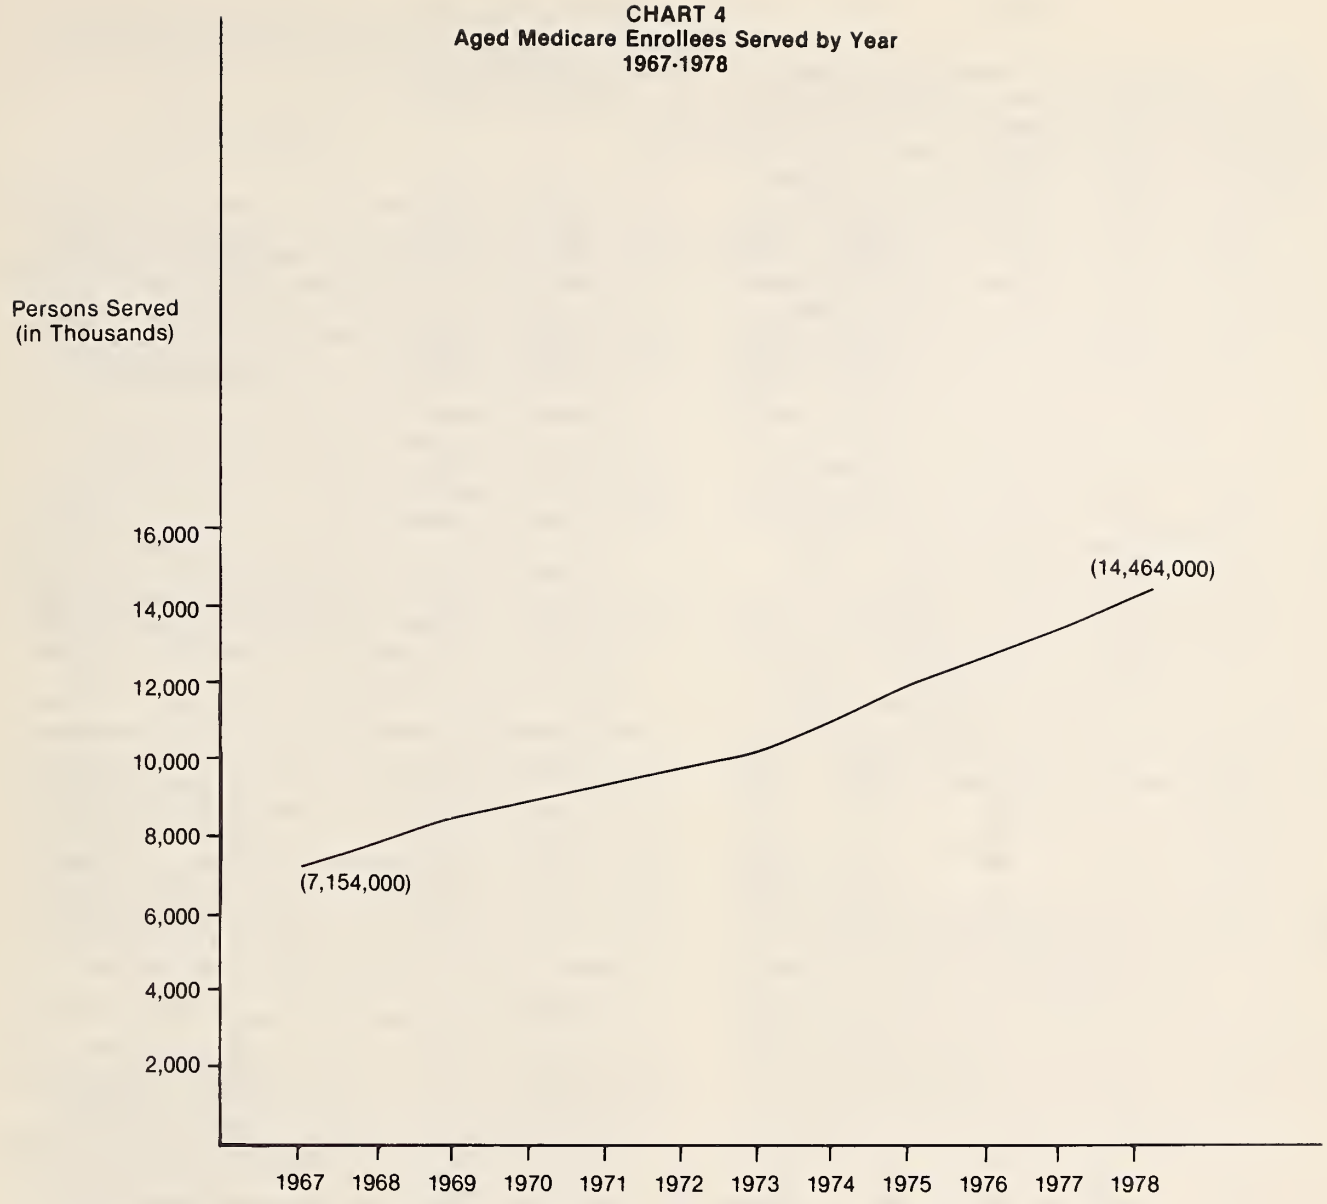
Aged Medicare Enrollees Served by Year
1967-1978



Disabled

Table C presents data on persons served and amounts reimbursed for each full year the disabled population has been included in the Medicare program. The important trends highlighting these data are presented here. Total reimbursements for disabled Medicare beneficiaries increased from $1 billion in 1974 to nearly $3 billion in 1978 (Table C and Chart 5)—an average annual increase of 30 percent. Actuarial projections indicate that reimbursements for disabled enrollees will exceed $10 billion by 1985 (Medicare Benefit Estimates, 1981). The number of disabled persons served increased from 792 thousand in 1974 to nearly 1.5 million in 1978 (Table C and Chart 6)—an annual rate of increase of 16.7 percent. Both rates of growth (total reimbursements and total users) were faster for disabled enrollees than for the aged. An examination of contributory factors to the growth in total reimbursement shows that reimbursement per person served increased at an annual rate of 11.3 percent (from $1,324 in 1974 to $2,033 in 1978), enrollee population showed an average annual increase of 9.7 percent (from 1.9 million to 2.8 million), and persons served per 1,000 enrolled increased an average of 6.4 percent per year (from 411 to 527). When the Interaction term was distributed proportionately among the known contributions of the individual factors, the relative contributions of these factors to increased reimbursements (Klarman, *et al.*, 1970) were:

Reimbursement per person served	41.2 percent
Persons served per 1,000 enrollees	23.4 percent
Enrollment	35.4 percent

The distribution of the Medicare dollar among the services used by the disabled (Table D) indicates that 65 percent of total expenditures went for services covered under the HI program while the remaining 35 percent was spent on SMI services. This approximate distribution has held since the disabled were covered under Medicare. Inpatient hospital services to the disabled, as for the aged, accounted for the major share of HI reimbursements (98 percent) but was a lower proportion of total 1978 reimbursements (63.8 percent) than for the aged (68.5 percent).

Reimbursements for SMI services take a larger share of Medicare reimbursements on behalf of the disabled and are distributed differently than those of the aged. Out-patient services accounted for 46 percent of SMI reimbursements to the disabled compared to 13 percent for the aged. The use of costly renal dialysis services in the outpatient setting by disabled enrollees with ESRD accounts for the difference from the aged in the distribution of reimbursements.

Among the disabled, SNF and HHA services absorb an even lower proportion of Medicare reimbursements than among the aged. In 1978, reimbursements for SNF services to the disabled ($12 million) accounted for 0.4 percent of the Medicare reimbursement and HHA services ($35 million)—only 1.2 percent.

Differences in the Distribution of Medicare Benefits by Demographic Characteristics

Table E presents use and reimbursement rates for the aged Medicare population, both for the program as a whole and for individual benefits by demographic characteristics. The major points presented in these tables are discussed in the "aged" section. This is followed by Table F which is a similar table pertaining to the disabled population. Table F is discussed in the "disabled" section.

Aged

Among the aged Medicare population in 1978, the number of persons served per 1,000 enrolled was increasingly higher for older age groups, ranging from 543 per 1,000 for those age 65-69 to 678 per 1,000 for those 85 years and over. Reimbursement per person served also was increasingly higher for older age groups, going from $1,231 for those age 65-69 to $1,778 for those age 85 and over. This increased use and reimbursement with older age groups is significant in light of the projected aging of the population. Program expenditures will be greater as the median age of enrollees increases than would be the case of increased enrollment alone.

Whites have had greater access to Medicare benefits than members of other races but the differences have been narrowing. In 1978, 600 whites per 1,000 enrolled received reimbursements compared to 536 per 1,000 non-whites. This difference of 12 percent is markedly lower than the 44 percent difference that prevailed in 1967 (375 and 261 per 1,000, respectively). In contrast to this, in 1978, reimbursement per person served for non-whites ($1,579) was 9 percent higher than that of whites ($1,448). This represented a change from 1967 when reimbursements per white person served ($593) were 6 percent higher than those of non-whites ($557). As a result of these trends, by 1978, reimbursements per white enrollee ($869) were only 3 percent higher than those for non-whites ($846). The comparable figures in 1967 were $222 and $145, a difference of 53 percent. Thus, the period between 1967 and 1978 witnessed greater equity in the distribution of Medicare benefits by race (Ruther and Dobson, 1981).

Program analyses have shown significant differences by race in the use of ambulatory medical services. In 1978, the user rate of physicians' and other medical services among whites (597 per 1,000 enrollees) was 14.6 percent higher than among persons of other races (521 per 1,000). The amount reimbursed per enrollee among whites ($223) was 22.5 percent higher than for non-whites. However, a reverse relationship holds for the use of outpatient benefits. Among non-whites, the user rate (260 per 1,000) was 13.5 percent higher than for whites (229 per 1,000), and reimbursement per enrollee was 87.5 percent higher for non-whites ($60) than for whites ($32). These differences reflect the greater reliance of blacks (the principal non-white group) on hospital outpatient departments for primary medical care, especially in metropolitan areas (Ruther and Silverman [in press]).

Throughout the course of the Medicare program, there has remained a difference in distribution of benefits among the geographic regions of the country. In 1978, the Northeast and West had the highest reimbursements per enrollee, at $972 and $964, respectively. The South, as has been true since the beginning of the program, had the lowest reimbursement per enrollee, $760. These differences reflect differences in regional price levels as well as differences in the composition of the enrollee population and the patterns of use of services.

TABLE C

Disabled Persons Served and Amounts Reimbursed by Type of Service, 1974-1978

Type of Service Reimbursed	1974	1975	1976	1977	1978	Percent Change From 1974 To: 1975	1976	1977	1978

Disabled

The following discussion of reimbursement and use rates pertain to the disabled Medicare population as a whole. The data are presented in Table F. Among disabled Medicare enrollees, reimbursement per person served and reimbursement per enrollee were consistently much higher than for the aged population. This reflects costly renal dialysis treatment used more extensively by the disabled than the aged population, as well as generally poorer health, and a greater need for services covered by the Medicare program (Ruther, 1981).[9] In 1978, reimbursement per disabled person served was $2,033 compared to $1,456 for the aged. The amounts reimbursed per enrollee were $1,071 and $864, respectively. The number of persons served per 1,000 enrolled was increasingly higher for older age groups among the disabled, while the opposite trend occurred with respect to reimbursement per person served. As a result there is no definitive trend with respect to age regarding reimbursement per enrollee.

As was the case with the aged population, whites showed a higher user rate in 1978 while non-whites showed greater reimbursement per person served. However, the difference in the distribution of Medicare benefits which favored whites among the aged favored non-whites among the disabled. In 1974, reimbursement per enrollee was 3 percent higher for non-whites than whites. This difference increased to 19 percent by 1978. Among the disabled, as among the aged, the non-whites place greater reliance than do whites on hospital outpatient departments for primary care services (Abramson, *et al.*, 1981).

As with the aged population, there were differences in use among disabled enrollees by geographic region of the country. The South consistently has had the lowest proportion of enrollees served. As a result, reimbursement per enrolee in the South was far lower than any of the other three regions. The 1978 reimbursement per disabled enrollee in the South was $919, which was 17 percent below the national level of $1,071. All other regions exceeded the national average.

Impact on the Beneficiary

This section first examines the distribution of personal health care expenditures in 1977 by type of service and source of payment for the aged.[10] It then reviews the distribution of Medicare reimbursements by the amount reimbursed per enrollee for both the aged and the disabled.

[9]When those disabled beneficiaries with ESRD are removed from the disabled population, the disabled population still shows a higher average reimbursement per person served than the aged population.

[10]The discussion of Impact on the Beneficiary focuses on date for 1977, since this is the most recent year for which all data are available to permit this type of analysis. Primary sources of data used in this analysis are "Differences by Age Groups in Health Care Spending," by Charles Fisher, *Health Care Financing Review*, Volume 1, Number 4, Spring, 1980, and an internal Health Care Financing Administration memorandum by Marion Gornick.

The Contribution of Medicare to Meeting the Costs of Health Care Services Used by the Aged

Since its inception, the Medicare program has been synonymous with health care for the elderly. As indicated in Table G, the Medicare program, while easing the burden of health care costs, covered about 44 percent of the $43 billion in health care expenditures incurred by the elderly in 1977 (Fisher, 1980).[11]

Public sources covered 64 percent of the cost of health care services used by the aged, while private expenditures represented the remaining 36 percent. Direct out-of-pocket payments (including Medicare deductibles and coinsurance payments but not premium payments for SMI or private health insurance) constituted 29 percent of the total. Private health insurance covered only 7 percent of the health care bill of the aged. This section discusses these aggregate statistics by examining individual health care services with regard to sources of payment. The data indicate that the level of Medicare reimbursement differs greatly by the type of service used. Consequently, out-of-pocket expenses vary widely across types of service.

Table G shows the total and *per capita* expenditures and percentage distributions of personal health care expenditures for the principal health care services used by the aged by major sources of private and public funding.[12] The ensuing discussion focuses on *per capita* expenditures in order to highlight Medicare's impact on the individual enrollee.

According to Table G, the average *per capita* cost for personal health care services for the aged was $1,821 in 1977. Direct (out-of-pocket) payments made by the aged towards their health expenditures totaled $530 per capita (29 percent of the total). However this figure does not include money paid out of pocket to cover SMI and private health insurance premiums. It does include the amounts paid for the SMI deductible and coninsurance. When expenditures for the insurance premiums are added in, the *per capita* out-of-pocket payments by individuals age 65 and over in 1977 were $698, more than 38 percent of total personal health care expenditures (Fisher, 1980). (Insurance premiums will be discussed in more detail at the end of this section.) The following discussion details the contributions that Medicare makes in helping the aged meet the expenses incurred for major categories of health care services.

[11]In this discussion, the term "aged" refers to those persons 65 years and over whether enrolled for the Medicare program or not.

[12]Medicare amounts mentioned in Table G differ slightly from those elsewhere in the text due to retroactive adjustments of the data and different definitions of the services.

n/a= Not Available

[1]Does not include money paid in premiums.

[2]Other private sources include philantropy, charities, and other private sources.

[3]Medicare amounts mentioned here differ slightly from those in the remainder of this summary. These data reflect retroactive adjustments not present in the summary data as well as different category definition. In addition, Medicare expenditures as described here include premium payments.

[4]Other public sources include VA benefits, as well as other Federal, State, and local programs.

[5]Other services includes other professional services, eyeglasses and appliances, and other health services.

[6]These numbers include expenditures by private health insurance and other private sources. Data is unavailable to separate the two components.

Source: National Health Expenditure data from "Differences by Age Groups in Health Care Spending" by Charles R. Fisher, *op cit.*

Hospital Services

Because the hospital insurance (HI) program was primarily conceived as an insurance program to meet the hospital expenses incurred by the aged, Medicare covers the costs of hospital care to a greater extent than it does for any other service. Medicare reimbursed $594 *per capita* for hospital care.[13] Thus nearly 75 percent of the $795 *per capita* cost incurred for hospital services in 1977 was covered by Medicare. When Medicaid and other public sources of payment are included, public sector payments ($700) account for 88 percent of the hospital care expenses incurred by the aged in 1977. Since private health insurance covered the major share of private payments for hospital care (7.1 percent of total), the remaining out-of-pocket expenses (about 4.6 percent) were largely the result of the Medicare inpatient deductible, coinsurance for days starting at the 61st day of hospitalization (used by 2.7 percent of Medicare enrollees receiving hospital services in 1977), and the use of lifetime reserve days (used by 0.7 percent of Medicare enrollees receiving hospital services in 1977).[14] The relatively low out-of-pocket hospital costs indicate that Medicare's hospital benefits contribute substantially to meeting the cost of hospital services used by the aged. In addition, some of these out-of-pocket payments were doubtlessly for outpatient services. These out-of-pocket costs for hospital services were most likely unevenly distributed, however, because only a few people use Medicare coinsurance or lifetime reserve days.

[13]Hospital care as defined here includes both inpatient (including Federal hospital and non-Federal long-term hospital care) and outpatient care. This follows the format used by Fisher.

[14]Medicare Statistical System, 1977 short-stay hospital tabulations (unpublished). See Provisions of the Law and Regulations, Appendix C for description of the Medicare hospital benefits.

Physician Services

While physicians' services comprise by far the largest component of the SMI program, the $174 *per capita* amount which Medicare reimbursed in 1977 accounted for only about 54 percent of total *per capita* expenditures ($321 *per capita)* by the aged for these services. The Medicare contribution of $174 constituted 93 percent of the total public sector contribution ($187). Nearly 42 percent ($134 *per capita)* was paid via private sources. A major portion of this, $84 *per capita,* was the result of direct out-of-pocket payments, the remainder being covered by private health insurance. Thus, over one quarter of the $321 spent *per capita* on physicians' services by the elderly were direct out-of-pocket payments. These out-of-pocket expenditures were associated with the $60 deductible, a 20-percent coinsurance on all reasonable charges above that mount and charges associated with "unassigned bills," as well as charges associated with noncovered physicians' services.[15]

Nursing Home Services

In the area of nursing home services, the Medicare program pays only for skilled nursing facility benefits which are intended to provide extended skilled nursing or rehabilitation services needed on a daily basis following an episode of hospitalization of at least 3 consecutive days. These services must be furnished in a facility certified by the Medicare program. Medicare does not pay for the lower levels of care (for example, intermediate care) which constitute a large portion of the services furnished in nursing homes. As a result, Medicare payments for nursing home services comprise only 3.4 percent ($15 *per capita)* of total expenditures ($456 *per capita)* for this service. The major portion of public sector expenditures for nursing home services came from the Medicaid program, which covers the less intensive services provided in intermediate care facilities (ICFs), as well as SNF services. In addition, Medicaid covers these without the time limits that characterize the SNF services covered by Medicare. Medicaid payments represented nearly 41 percent ($187 *per capita)* of total nursing home care expenditures for the elderly in 1977. Since neither private health insurance nor other private sources pay for a significant amount of nursing home care, half of all nursing home expenditures were financed by out-of-pocket payments. This results in a *per capita* expenditure of $228 and represents the greatest financial risk for persons aged 65 and over. The magnitude of this risk becomes even more severe for persons who need long-term nursing home care.

According to the 1977 National Nursing Home Survey (see Table H) only about 5 percent of persons age 65 and over were in nursing homes in 1977 (1.1 million). Public sources represented the primary source of payment for 54.4 percent of nursing home residents age 65 and over (National Nursing Home Survey, 1977). The vast majority of residents supported primarily by public sources received this assistance from the Medicaid program. Medicaid was the primary source of payment for over 47 percent of all aged nursing home residents in 1977 (26.9 percent in ICFs and 20.3 percent in SNFs). Of the remaining nursing home residents receiving the bulk of their support from public sources. Medicare paid for 1.8 percent of the total and other government sources 5.4 percent of the total. About 40 percent of aged nursing home residents have as their primary source of payment their own income or family support. Since the nursing home population represented only approximately 5 percent of the aged population, only 2 percent of the aged population is incurring the major share of nursing home expenses for which they are making out-of-pocket payments. Thus, the *per capita* out-of-pocket expenditures of $228 noted above were really concentrated on 2 percent of the aged population. This 2 percent "self-pay" population, therefore, paid about $11,000 per year when no other aid is received. Even if other sources comprised half of the total payments, the average out-of-pocket expenditures per private-paying patient would still be over $100 per week. It is clear that not many persons could sustain this level of expenditure for long periods before reaching the required level of financial need to qualify for Medicaid, or, for persons living in facilities not certified for reimbursement under Medicare, to be sustained by cash assistance.

Drug and Dental Services

The Medicare program does not cover dental services or prescription drugs given outside an inpatient setting. As a result, public sources paid for only about 12 percent of these services in 1977—most (11.3 percent of the $174 *per capita* total) by the Medicaid program. As was the case with nursing home services, private health insurance and other private sources of financial aid pay little in support of drug and dental services. Therefore, over 86 percent ($150 *per capita*) of payments for these services were paid out of pocket.

All Other Services

Other professional services, eyeglasses and appliances, and other health care services for which personal health care expenditures have been tabulated were combined for presentation here. These services accounted for a $76 *per capita* expenditure, 29 percent of which was covered by the Medicare program and an additional 18 percent came from other public sources. However, the largest percentage of payments for these services, nearly 41 percent ($31 *per capita*) were again out of pocket.

[15]If the physician feels that the reasonable charges offered by Medicare are not adequate compensation for his services, he may choose not to accept assignment. In this instance the user is liable for the coinsurance amount on the allowed charge plus the difference between the allowed charge and the actual charge by the physician. The enrollee submits the bill to the Medicare carrier for reimbursement of the allowed charge. In 1977, 76 percent of users of physicians' services had one or more unassigned claims.

TABLE H
Number and Percent of Distribution of Persons 65 Years of Age and Over in Nursing Homes by Primary Source of Financial Support, 1977

	All Sources	Income or Family Support	Medicare	Medicaid Skilled (SNF)	Medicaid Intermediate (ICF)	Other Government Assistance or Welfare	All Other Sources
Number of Nursing Home Residents in 1977	1,125,900	454,500	20,200	228,000	302,900	60,900	59,400
Percent Distribution	100.0	40.4	1.8	20.3	26.9	5.4	5.3

Source: Adopted from National Nursing Home Survey: 1977 Summary for the United States, National Center for Health Statistics, Table 40.

Insurance Premiums

In addition to payments for medical services, the elderly also incur out-of-pocket expenses for health insurance premiums. These premium payments are not shown separately in Table G. SMI premiums for the aged totaled $78 *per capita* in 1977, when including those aged not enrolled under the SMI program. A majority of Medicare enrollees also have some form of private health insurance (Medigap insurance) designed primarily to pay for deductibles and coinsurance associated with the Medicare program.[16] Premiums for this complementary insurance amounted to $90 per person in 1977.

In sum, the out-of-pocket cost-sharing expenses for services only partly covered by Medicare, expenses incurred to pay for services beyond the scope of Medicare coverage, totalled $530 in 1977. When payment for insurance premiums ($78 for Medicare SMI premiums and $90 for Medigap insurance premiums) is included, the figure rises to $698. The $698 paid out of pocket by Medicare enrollees represents a significant increase in dollar amount from the pre-Medicare out-of-pocket figures of $300 for fiscal year 1966.[17] When removing the effects of inflation, one finds that in terms of 1966 dollars, out-of-pocket expenses in 1977 had risen to only $322.[18]

Thus, in terms of income, there has been a reduction in the relative burden of health care expenditures on the aged. The $300 *per capita* out-of-pocket expenditure in 1966 represented 15 percent of the average income of the aged, whereas the $698 spent out of pocket in 1977 represented about 12 percent of average aged income of $5,900.[19] However, for selected portions of the aged population, out-of-pocket expenses can be a heavy burden. The foregoing analysis indicates that expenditures for long-term care is one such area.

[16]Some 60 percent of Medicare enrollees have private insurance to supplement hospital expenses, 52 percent to supplement surgical expenses, and 11 percent have first dollar coverage for ambulatory physician's care. Gornick, Marian, "Fifteen Years of Medicare: The Paradox of Increased Public Spending and Increased Beneficiary Burden," unpublished paper presented at the American Public Health Association meetings in Detroit Michigan, November, 1980. Data is from Health Interview Survey, National Center for Health Statistics.

[17]Gornick, Marian, *ibid.*

[18]The $322 figure for health care expenditures was obtained by deflating the $698 for 1977 in terms of 1966 medical care dollars based on the Consumer Price Indices for 1966 and 1977. *Handbook of Labor Statistics, 1978,* Bulletin 2000, U.S. Department of Labor, Bureau of Labor Statistics, 1979.

Distribution of Reimbursements

Aged

Figure 1 shows the percent distribution of aged persons served and total reimbursements by the amounts reimbursed per person served. Sixty-one percent of the aged persons served in 1978 received less than $500 in reimbursements, accounting for slightly more than 5 percent of total reimbursements. At the other end of the spectrum, 14.6 percent of aged Medicare users had reimbursements of $3,000 or more, representing over 70 percent of total reimbursements. As was noted directly above, this distribution does not fully convey the patterns of health expenditures of the aged population, as the Medicare program is only one source of payment for health care service.

The percentages shown in the persons column in Figure 1 represent only those aged persons who received reimbursements for services under Medicare in 1978. Since the aged enrollment in that year was nearly 24.4 million people, almost 10 million enrollees (nearly 40 percent) did not receive any reimbursed services in that year. As a result of this, the percentage of enrollees incurring reimbursements of $3,000 or more is actually much smaller than Figure 1 indicates, about 8.7 percent. This pattern shows clearly the distribution of risks characteristic of the insurance concept.

Disabled and Population Under 65 Years

Figure 2 shows that over 55 percent of disabled persons served incurred reimbursements of $500 or less, accounting for 3.6 percent of total reimbursements. At the opposite extreme, 17.9 percent had reimbursements of $3,000 or more, totaling nearly 78 percent of all reimbursements.

Figure 3 shows that half of the health care expenditures for all persons under 65 were incurred by only 5.3 percent of the persons under 65 using services. Thus, the data show that for both Medicare populations as well as for the general population under 65, a relatively small percentage of the population using services accounts for the major portion of total reimbursements/expenditures.

In both cases, as was the case with the aged, the distributions are even more skewed than Figures 2 and 3 indicate. In 1978, the 1,472,000 disabled persons served (Figure 2) represented only about 53 percent of the 2,793.236 disabled enrollees. Thus, the 17.9 percent of persons served receiving reimbursements of $3,000

FIGURE 1
Percent Distribution of Aged Persons Served and Amounts Reimbursed Under Hospital Insurance and/or Supplementary Medical Insurance by Amounts Reimbursed, 1978

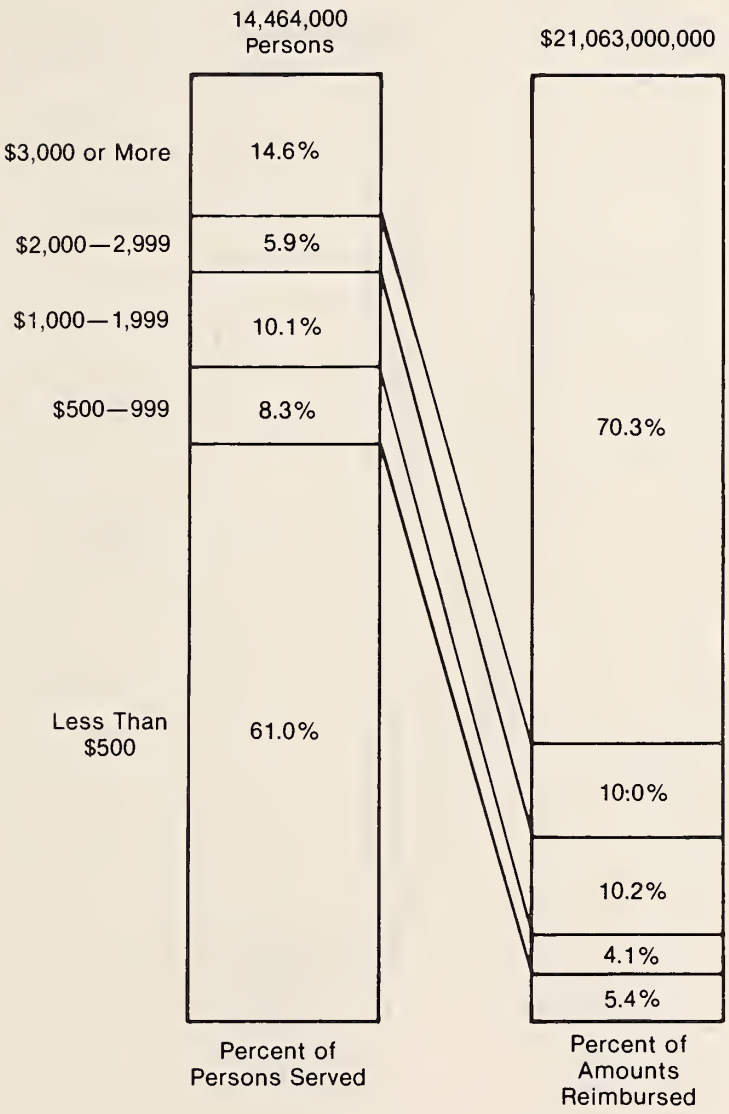

FIGURE 2
Percent Distribution of Disabled Persons Served and Amounts Reimbursed Under Hospital Insurance and/or Supplementary Medical Insurance by Amounts Reimbursed, 1978

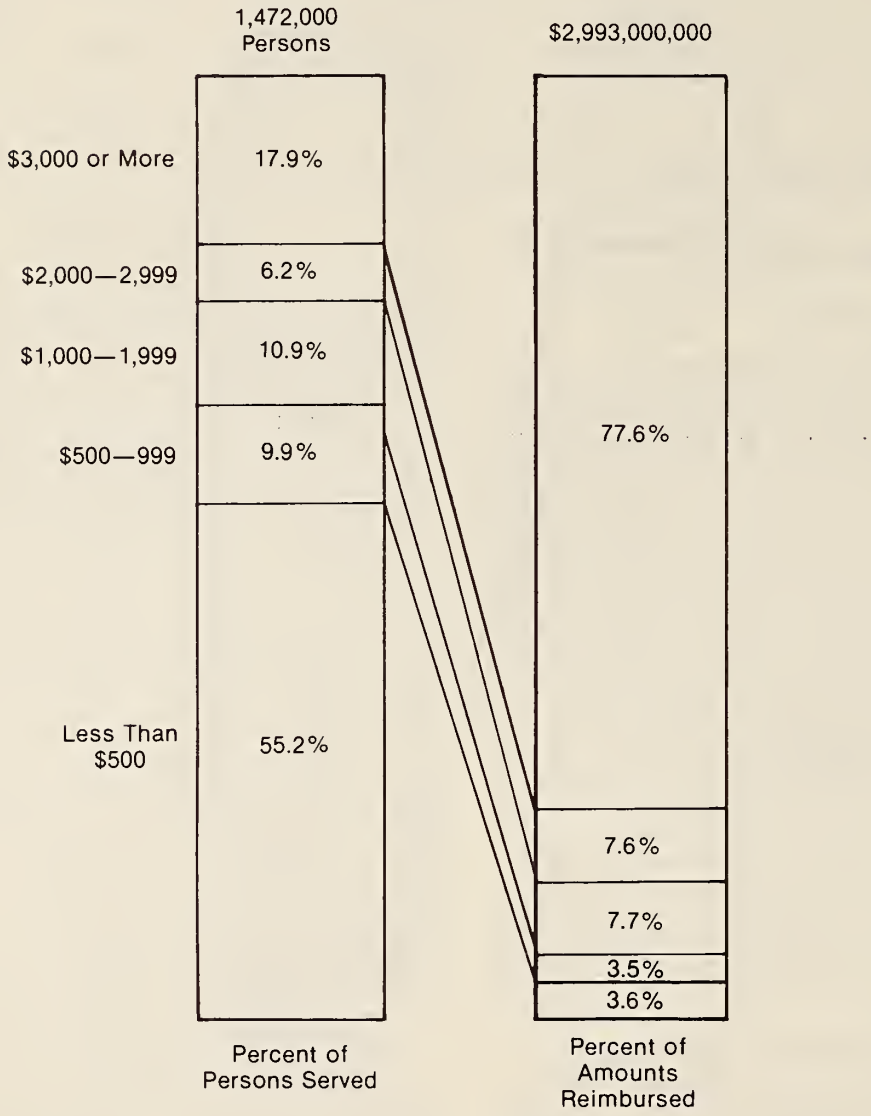

FIGURE 3
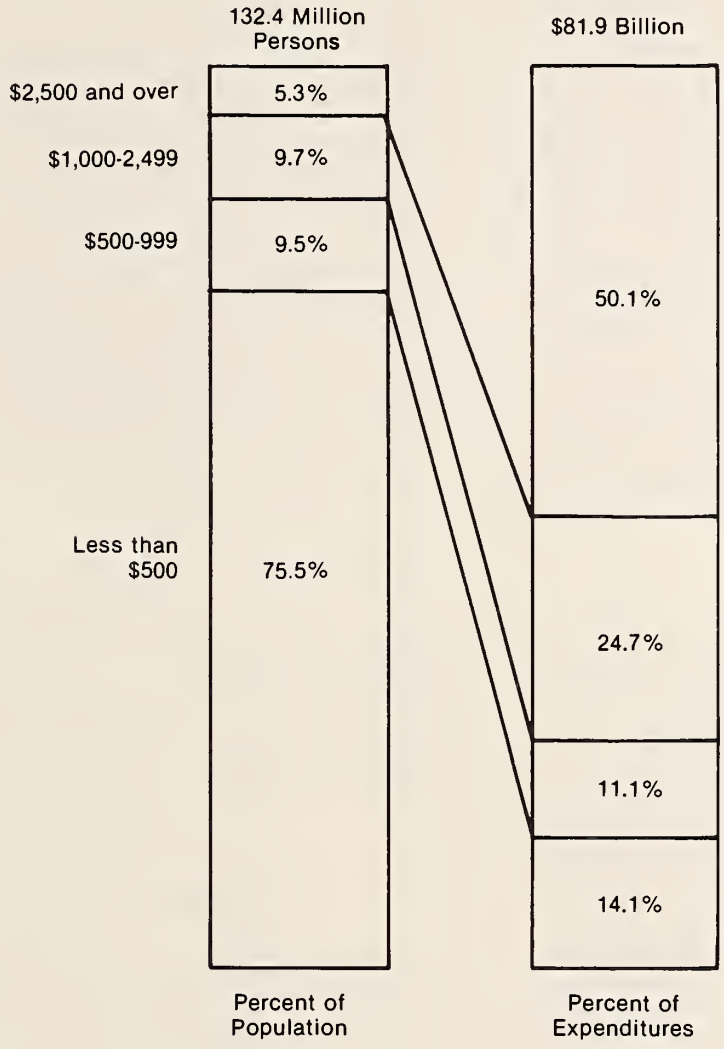
Percent Distribution of Health Care Expenditures for Population Under 65 Years Incurring Expenses: Persons and Aggregate Expenses (Projections for Fiscal Year 1978)[1]



[1] Expenditures include hospital, physician, outpatient, other professional services (except dental care), and prescription drugs.

SOURCE: Congressional Budget Office, *Catastrophic Health Insurance,* Budget Issue Paper, (January 1977), Congress of U.S., Washington, D.C.

or more represented only about 9.4 percent of the enrollee population. Since about 47 percent of the disabled enrollees received no reimbursements, and another 29 percent received less than $500, it appears that among disabled enrollees (as among aged enrollees and the population under age 65 as a whole), there was a low probability of incurring a financially catastrophic illness—a basic premise of insurance programs.

The distribution of Medicare expenditures is somewhat more even than among the general population under 65 because the Medicare enrollee groups are characterized by a high incidence of illness and disability. In fact, it was the prevalence of illness and disability among these groups and the attendent costs which identified them as needing the protection extended by the Medicare program. Thus, the need for and use of medical services is more likely to spread over a larger proportion of the Medicare groups than for the general population under 65. One significant factor contributing to the skewness in the distribution of reimbursements among the aged is the costs of services to persons who die. An analysis of program experiences in 1978 showed that nearly 21 percent of the Medicare reimbursements were made on behalf of the 4.4 percent of the enrollees who died during the year (Medicare Statistical System, 1978 Summary Data, [unpublished]).

Summary of Medicare Impact

Medicare expenditures have been rapidly escalating, from the $4.2 billion spent in the first full year of the program (1967), to nearly 6 times that amount by 1978 ($24.1 billion). This trend is expected to continue (barring any major legislative changes in the Medicare Program); actuarial projections for fiscal year 1985 estimate reimbursements of more than $72 billion. While the Medicare program remains the primary source of health insurance coverage for the aged, it covered (in 1977) only slightly more than 44 percent of their total health care expenditures. This 44 percent figure differs greatly by service: Medicare coverage provides the best protection for the costs of hospital care services (Medicare paid for 74.7 percent of health care expenditures), and provides the least protection for the costs of nursing home services (Medicare's SNF coverage paid for only 3.4 percent of total nursing home services). While Medicare represents the largest single source of payments for health care, the next largest portion, $698 per capita in 1977, represented out-of-pocket payments made either by the aged themselves or by their families. This $698 figure represents 12 percent of the average income of the elderly indicating that Medicare has (in the relative sense) helped out personal health care costs, as the pre-Medicare figure of $300 *per capita* for out-of-pocket payments represented 15 percent of the average income of the elderly. Still, the figure of $698 is unevenly distributed across benefits and among aged persons; therefore, for some, out-of-pocket expenses still remain quite high. Persons needing prolonged nursing home care are the principal group with burdensome out-of-pocket expenses.

Appendix A

Description of the Data

Source of the Data

Data for this report come from bills of the HI program and from payment records of the SMI program received by HCFA. The criteria for services provided in 1976 through 1978 are: selected hospital or SNF bills with discharge dates or dates of service in 1976 through 1978; selected bills for home health and outpatient services when the last date of service was in 1976 through 1978; and selected payment records (physicians' bills, primarily) for services incurred in these years. Data for physicians', and other medical services from payment records consist of three forms: the 1490, used to request reimbursement for services provided by physicians and suppliers of medical services, including ambulance and independent laboratory; form 1554, used by hospitals to bill for hospital-based physicians; and form 1556, used by GPPPs dealing through a carrier.

The data for 1976 through 1978 are for services performed in each year and recorded in HCFA central records through December 1979.

Sampling Method

Data are based on a 5-percent sample of beneficiaries age 65 and over. Samples are selected by the beneficiary's health insurance number. Since this number appears on every claim, each person's record may be summarized. Counts are multiplied by 20 to obtain the estimates of totals shown in the tables. All disability beneficiary claims are selected.

Appendix B

Reliability of Estimates*

The sample estimate and an estimate of its standard error permit construction of interval estimates with prescribed confidence that the interval includes the average result of all possible samples.

To illustrate, if all possible samples were selected, each of these were surveyed under essentially the same conditions, and an estimate and its estimated standard error were calculated for each sample, then—

i. approximately two-thirds of the intervals from one standard error below the estimate to one standard error above the estimate would include the average value of all possible samples. An interval from one standard error below the estimate to one standard error above the estimate is called a two-thirds confidence interval.

ii. approximately nineteen-twentieths of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average value of all possible samples. An interval from two standard errors below the estimate to two standard errors above the estimate is called a 95 percent confidence interval.

*Prepared by James Beebe, Analytic Studies Branch, Office of Research, Health Care Financing Administration.

iii. almost all intervals from three standard errors below the sample estimate to three standard errors above the sample estimate would include the average value of all possible samples.

Thus, for a particular sample, one can say with specified confidence that the average of all possible samples is included in the constructed interval.

To derive estimates of standard errors that would be applicable to a wide variety of items and could be prepared at the moderate cost, a number of approximations were required. As a result, the standard errors presented provide a general order of magnitude rather than the exact standard error for any specified item. The following examples illustrate the use of the standard error tables in forming confidence intervals.

Table I contains approximations to standard errors for estimates of the number of persons using specified reimbursed services. To estimate approximate standard errors of numbers not presented directly in the tables, linear interpolation may be used.

As an illustration, General Table 1 for 1978 shows 130,860 persons using both HI and SMI reimbursed services in Indiana. Using linear interpolation in Table I for the estimated number of persons gives

TABLE I

Approximate Standard Error of Estimates of Number of Persons Using Reimbursed Services

Estimated Number of Persons	Standard Error
1,000	138
5,000	308
10,000	436
25,000	689
50,000	974
100,000	1,375
150,000	1,682
200,000	1,940
250,000	2,167
500,000	3,046
1,000,000	4,255
2,000,000	5,868
3,000,000	6,998
4,000,000	7,857
5,000,000	8,527
6,000,000	9,050
7,000,000	9,451
8,000,000	9,744
9,000,000	9,940
10,000,000	10,043
11,000,000	10,057
12,000,000	9,982
13,000,000	9,816

$$1{,}375 + (1{,}682\text{-}1{,}375) \times \frac{130{,}860\text{-}100{,}000}{150{,}000\text{-}100{,}000} = 1{,}564$$

as the estimated standard error for this estimate. Based on these data, the two-thirds confidence interval is from 129,295 to 132,424 persons. One could conclude that the average estimate of total persons using both HI and SMI reimbursed services in Indiana derived from all possible samples lies within a range computed in this way for roughly two-thirds of all possible samples. Similarly, we conclude that the average estimate of total persons using both HI and SMI reimbursed services in Indiana derived from all possible samples lies within the interval from 127,732 to 133,988 with 95 percent confidence.

Table I also may be used to obtain approximations to the standard errors of estimates of persons not using reimbursed services. For example, again in the case of Indiana, the number using no reimbursed services is shown in General Table 1 to be 284,184. Interpolating in Table I for 284,184 gives a standard error of 2,287.

Table J shows the approximate standard error of estimated number of persons served per 1,000 enrolled. Double linear interpolation may be needed with Table J, since both the number of persons enrolled (in 1,000s) and the estimated number of persons receiving reimbursed services per 1,000 enrolled may require interpolation.

As an illustration, in General Table 3 in 1978 for Wyoming, 2,363 persons per 1,000 used some form of reimbursed HI. HI enrollment for Wyoming was 35,894. Interpolating first to determine the standard error of 236.3 for a base of 25,000 enrolled persons gives 18.4. Similarly, interpolating for a base of 50,000 gives 9.4 as the standard error. The double linear interpolation is completed by interpolating between those derived values for the enrollment base of 35,894. This gives the final estimated standard error of 11.7 persons per 1,000 enrolled. Thus, the average estimate of persons per 1,000 who used some form of reimbursed HI derived from all possible samples would have roughly a two out of three chance of lying between 224.6 and 248.0

Table K shows approximations to relative standard errors for total amounts reimbursed, for average reimbursement per person enrolled, and for average reimbursement per person served. A relative standard error (expressed in percent) is 100 times the standard error of an estimate divided by the estimate.

The relative errors are used as multipliers of estimated values of amounts reimbursed or average reimbursement per person served to derive the associated approximate standard errors. These calculated approximate standard errors are interpreted and used in the same way as shown in Tables I or J.

An illustration comes from General Table 4 in 1978. Total reimbursement for SMI for Tennessee was $85,089,000, and the number of persons served is shown in General Table 2 as 250,600. Interpolation in Table K gives a relative error of 1.6 percent. The standard error corresponding to this relative error is found by multiplying the estimated reimbursement by the relative error—that is, $85,089,000 multiplied by 1.6 percent, or $1,361,000.

TABLE J

Approximate Standard Error of Estimated Number of Persons Served per 1,000 Enrolled

Estimated Number of Persons Served per 1,000 Enrolled	Approximate Base of Rate (number of persons enrolled in thousands) [1]												
	25	50	100	250	500	750	1,000	2,500	5,000	10,000	20,000	21,000	22,000

Appendix C

Provisions of the Law and Regulations

The Medicare program, enacted on July 30, 1965 as Title XVIII of the Social Security Act, became effective on July 1, 1966. In 1972 major changes were made in the program's provisions by Public Law 92-603 enacted October 30, 1972. The name of the Medicare program was officially changed to Health Insurance for the Aged and Disabled. (The Social Security Act, as amended through December 31, 1978).

Effective July 1, 1973, Medicare coverage was extended to disabled beneficiaries under the social security or railroad retirement programs, and to persons under age 65 who require dialysis or a kidney transplant for end-stage renal disease.

The program makes available two separate but complementary insurance programs: hospital insurance, covering nearly all persons age 65 and over, disabled beneficiaries under age 65 entitled to benefits for at least 24 consecutive months, and covered workers and their dependents with end-stage renal disease who require renal dialysis or a kidney transplant; and supplementary medical insurance, covering those persons who voluntarily pay the premiums. Beginning July 1973, most persons age 65 or over otherwise ineligible for hospital insurance may enroll voluntarily and pay the premiums for hospital coverage if they are enrolled for supplementary medical insurance.

Hospital Insurance Program

The hospital insurance (HI) program pays for part of the cost of inpatient hospital care and related health care services provided by skilled nursing facilities (formerly termed extended care facilities), and home health agencies following a period of hospitalization. For the services to be covered, they must be provided by institutions and organizations which have been certified as qualified providers of services and which have signed an agreement to participate in the program (Medicare: Health Insurance for the Aged, 1972-74). An exception exists under special provisions for hospitals certified to provide only emergency services.

Benefits

The law provides limits on services which may be covered under the HI program. These limits are based on the concept of a "benefit period." A benefit period begins with the first day of hospitalization and ends when the individual has not been a bed patient in a hospital or skilled nursing facility for 60 consecutive days.

The law also established cost-sharing by the individual through deductible and coinsurance payments. The Secretary of the Department of Health and Human Services is required each year to determine the deductible amount, by a formula, specified by law, which is based on the average per diem rate for inpatient services furnished beneficiaries during the preceding calendar year. The deductible amount tends to approximate the current cost of 1 day in a hospital. The coinsurance amount for hospital inpatient care is set at one-fourth of the deductible, for lifetime reserve days at one-half of the deductible, and for skilled nursing facility services at one-eighth of the deductible.

INPATIENT HOSPITAL BENEFITS

Covered hospital services include room and board in accommodations containing from two to four beds, nursing services (except for private duty nursing), drugs and biologicals, and other services ordinarily furnished by a hospital to its inpatients.

The program does not cover the services of physicians (including staff radiologists, anesthesiologists, pathologists and psychiatrists) except for services provided by interns or residents under approved teaching programs.

The program pays for the "reasonable costs" of covered services in a participating hospital for up to 90 days in a benefit period. Full payment is made for the first 60 days of hospitalization, less a deductible applicable to each benefit period. The deductible, which is adjusted to each year, was $104 in 1976, $124 in 1977 and $144 in 1978. For each of the remaining 30 days in the benefit period, the patient pays a coinsurance amount equal to one-fourth of the deductible.

Each hospital insurance beneficiary also has a "lifetime reserve" of 60 additional hospital days which can be used at his option whenever he has exhausted the 90 days covered in a benefit period. Lifetime reserve days were subject to a copayment which was equal to one-half of the deductible. This amounted to $52 in 1976, $62 in 1977, and $72 in 1978.

The cost of the first three pints of blood (or equivalent amounts of packed red blood cells) furnished a patient during a benefit period is also deductible unless the patient arranges for replacement. Charges for any additional blood are covered under the program as are charges for blood administration, storage, etc.

The program also pays for emergency services in a nonparticipating hospital. Each nonparticipating hospital providing emergency services may elect to claim payments from the Medicare program for emergency services rendered beneficiaries in a given year. If the hospital elects this option, reimbursements are made as described above. If the hospital elects not to bill the program, the beneficiary claims direct payment and submits the itemized bill. In this case, reimbursement is based on reasonable charges for covered services, and amounts to 60 percent of reasonable charges for room and board, plus 80 percent of such charges for ancillary services. Payment is subject to the deductible and coinsurance provisions of the law.

Hospital insurance benefits also include reimbursement for inpatient tuberculosis and psychiatric hospital services. However, there is a lifetime limit of 190 days of care in a psychiatric hospital. When a person in a participating psychiatric hospital becomes entitled to hospital insurance, the number of days he was such an inpatient in the 150-day period prior to his eligibility is deducted from his days of entitlement to inpatient psychiatric care in that benefit period, but not from the lifetime limitation.

Hospital insurance benefits have been extended to cover payments for inpatient services furnished by a foreign hospital, if it is closer to or more accessible to the beneficiary's residence than a U.S. hospital. For benefits to be payable, the beneficiary must be a U.S. resident and the foreign hospital must be accredited by, or have standards equivalent to, the Joint Commission on Accreditation of Hospitals (JCAH).

SKILLED NURSING FACILITY BENEFITS

Covered extended care services furnished by a skilled nursing facility include nursing care; room and board; physical, occupational or speech therapy; drugs and biologicals; medical service of an intern or resident-in-training of a hospital having a transfer agreement with the skilled nursing facility; and other necessary health care services generally provided by such facilities.

The program pays for the reasonable costs of all covered inpatient services in participating skilled nursing facilities for up to 100 days in a benefit period. Benefits are payable only following discharge from a hospital after a stay of 3 consecutive days or more; generally the admission to the facility must occur within 14 days of hospital discharge. However, a period of up to 28 days after discharge from a hospital is permitted when the patient's medical condition or shortage of beds delay the admission date. Full payment is made for the first 20 days. For each of the remaining 80 days, the patient pays a coinsurance amount per day equal to one-eighth of the inpatient hospital deductible ($13 in 1976, $15.50 in 1977, and $18 in 1978).

For SNF care services to be covered, a physician must certify that the patient needs daily skilled nursing care or skilled rehabilitation services and must order the services. The 1972 amendments include a provision for advance approval of extended care services, whereby the Secretary of HEW established, by medical condition, when a patient will require skilled nursing care services after hospitalization. Accordingly, a patient's physician may certify the need for a skilled nursing facility and submit a plan, in advance of admission, as to the type of services to be provided. The plan will be presumed to be the type of care covered in a skilled nursing facility.

POST-HOSPITAL HOME HEALTH BENEFITS

Covered home health services may include part-time or intermittent nursing care; physical, occupational or speech therapy; part-time or intermittent services of a home health aide; medical supplies (other than drugs and biologicals) and the use of medical appliances; and, in certain cases, services of an intern or resident-in-training of a teaching hospital. The services must be furnished by or under arrangements of an approved home health agency.

Coverage under HI provides for payment of the reasonable cost of up to 100 home health visits after the beginning of one benefit period and before the beginning of the next. There is no deductible or coinsurance. The visits must occur within a year following a beneficiary's most recent discharge from a hospital stay of at least 3 consecutive days or from a covered stay in a skilled nursing facility. The home health services must be necessary for further treatment of a condition for which the patient received services in the hospital or skilled nursing facility. A home health plan must be established by the patient's physician within 14 days after the hospital or skilled nursing facility discharge. The 1972 amendments include a provision for advance approval of home health coverage similar to that provided for skilled nursing care services.[20]

Supplementary Medical Insurance Program

The supplementary medical insurance (SMI) program provides coverage for a variety of medical services and supplies furnished by physicians or others in connection with physicians' services; outpatient hospital services; and home health services. Individuals participate voluntarily in the program. Premiums are paid by or on behalf of all beneficiaries, and by the Federal Government from general revenues.

Benefits

Physicians' services covered under the program include visits to the home, office, hospital, and other institutions. The program also pays for other services and supplies, such as drugs, and biologicals that cannot be self-administered, if they are furnished as a part of a physician's professional service; diagnostic X-ray tests, diagnostic laboratory tests, and other diagnostic tests, X-rays, radium, and radioactive isotope therapy; splints, casts, and other devices used for reduction of fractures and dislocations; purchase or rental of durable medical equipment; ambulance service, and prosthetic devices that replace all or part of an internal organ. Also provided are home health visits provided by a certified home health agency in accordance with a home health plan established by the patient's physician (no prior hospitalization is necessary). Payment may be made for up to 100 home health visits in a calendar year without regard to similar services received under the HI program.[21]

Also covered are hospital services incident to physicians' services rendered to outpatients, and outpatient speech and physical therapy services. In addition, effective July 1, 1973, the 1972 amendments provide for services of a physical therapist in independent practice furnished in his office or the patient's home, under a physician's plan. Reimbursement would be limited to not more than $100 of incurred expenses in a calendar year.[22]

Some services of a licensed chiropractor are covered. Covered services are limited to treatment by means of manual manipulation of the spine to correct a subluxation (partial dislocation) demonstration by X-ray.

---

[20]The Omnibus Reconciliation Act of 1980 (P.L. 96-499) expanded the Medicare home health benefits but these did not become effective until July 1, 1981 — after the period covered in this report.

[21]Effective July 1, 1981, the Omnibus Reconciliation Act of 1980 (P.L. 96-499) provided for an unlimited number of home health visits, eliminated the 3-day prior-hospitalization requirement for HHA services under HI, and eliminated the $60 deductible for HHA services under SMI.

[22]The Omnibus Reconciliation Act of 1980 increased this amount to $500 effective at the beginning of calendar year 1982.

In each calendar year through 1972, a $50 deductible had to be satisfied before payment could be made under the SMI program. In 1973, the deductible was raised to $60, where it currently remains. Bills count toward the deductible on the basis of incurred rather than paid expenses; only charges allowed under the program count toward the deductible. To preclude the possibility of a beneficiary having to meet a deductible twice in a short period of time, a "carryover" provision is provided. Accordingly, covered expenses incurred in the last quarter of the year and applied to the deductible in that year are also credited toward the deductible for the following year.

After the deductible has been met, the SMI program pays for 80 percent of the allowed (reasonable) charges for covered physicians' services and most other medical services. However, deductible and coinsurance requirements do not apply to the services of radiologists and pathologists furnished to hospital inpatients. "Reasonable" charges for such services are reimbursed.

When an independent laboratory bills patients directly and accepts assignment, the Secretary of HHS is authorized to negotiate a payment rate with the laboratory for the diagnostic tests it provides Medicare beneficiaries. Reimbursement on assigned bills is made at 100 percent of the negotiated rate; the deductible and coinsurance requirements do not apply. Hospital services, incident to outpatient care, and home health services, are subject to the deductible and are reimbursed on the basis of 80 percent of reasonable costs. However, coinsurance payments for home health services were eliminated after December 1972.

The law sets special limits on the payment which may be made for outpatient treatment of mental illness; recognition of incurred expenses is limited to the lesser of $312.50 or 62.5 percent of actual expenses in a calendar year. Since only 80 percent of allowed charges may be reimbursed, the effect is to limit payment to $250 or 50 percent of the allowed charges in any year after the deductible has been met, whichever is less.

Eligibility

Hospital Insurance

Almost all persons age 65 and over are eligible for benefits under the hospital insurance program. Included are those entitled to monthly social security cash benefits or payments from the railroad retirement system. Further, a special transitional provision provides eligibility for certain persons who do not qualify for monthly cash benefits on the basis of their own covered employment or as a dependent or survivor of an insured worker. The provision applies, generally, to a person age 65 or over who (1) attained age 65 before 1968, or (2) attained age 65 after 1967 with not less than three quarters of social security coverage, whenever acquired, for each calendar year elapsing after 1966 and before the year in which he attained age 65. For persons who reached age 65 after 1968, the amount of work credits (quarters of coverage) needed increases by three quarters each year—six quarters are needed by those who reached 65 in 1969, nine by those who reached 65 in 1970 and so on. The transitional provision does not apply to persons attaining age 65 after 1974.

Hospital insurance protection under certain circumstances can be retroactive for as many as 12 months before the month an individual files his application for entitlement. For example, an individual may apply 11 months after he attains age 65 and still be entitled to benefits from the month he attained age 65.

Effective July 1, 1973, disabled persons entitled for not less than 24 consecutive months to cash benefits under the social security or railroad retirement programs are eligible for benefits under the hospital insurance program. Those covered include disabled workers under 65 years, disabled widows and disabled dependent widowers between the ages of 50 and 65, women age 50 or older entitled to mother's benefits who for 24 months met requirements for disability benefits but did not file a claim, and disabled beneficiaries age 18 or over who became disabled before age 22. A person must be disabled for 5 months before disability benefits can begin. Medicare coverage begins with the 30th month after the first full calendar month of disability.

Hospital insurance protection was also extended to persons under age 65 who are currently or fully insured or entitled to monthly social security benefits, and to their spouses or dependent children who have end-stage renal disease and require renal dialysis or a kidney transplant. Eligibility for coverage begins with the 3rd month after a course in renal dialysis begins or before this qualifying dialysis period for ESRD beneficiaries receiving kidney transplants without starting or receiving dialysis in preparation for transplantation. Elgibility ends 36 months after the month in which an individual undergoes kidney transplantation.

The law now permits persons attaining age 65 who are ineligible for hospital insurance either as cash beneficiaries or under the transitional provisions to purchase hospital coverage. Coverage under this provision was effective July 1, 1973 and the monthly premium set at $33 rose to $36 starting July 1, 1974, to $40 beginning July 1, 1975, to $45 on July 1, 1976, to $54 on July 1, 1977, and to $63 on July 1, 1978. The premium represents the estimated *per capita* cost for services furnished under the hospital insurance program. Individuals may enroll in the hospital insurance program only if they enroll in the supplementary medical insurance program. Enrollment periods for hospital protection were the same as the initial and general enrollment periods under supplementary medical insurance.

Persons who retired from Federal service after July 1, 1960, and had the opportunity to be covered under the Federal Employees Health Benefits Act of 1959 are ineligible for hospital insurance benefits under the transitional provision.

Also ineligible are aliens with less than 5 years of continuous residence in the United States, and those persons convicted of crime against the security of the United States.

Supplementary Medical Insurance

Persons entitled to benefits under the hospital insurance program, retired Federal employees, aliens residing in the United States, and persons not eligible for hospital insurance under the transitional provisions may participate voluntarily in the SMI program. To enroll prior to July 1, 1973 the person had to file a written request with the Social Security Administration during specified periods. To prevent loss of entitlement or delay, the 1972 amendments provide for automatic enrollment in SMI for persons as they become entitled to hospital insurance. An individual may decline SMI enrollment. If he withdraws before his coverage starts, there is no premium liability, nor is he charged with an enrollment.

Individuals may enroll in the SMI program only during the initial and general enrollment periods. The initial enrollment period begins with the third month preceding the one in which an individual is first eligible and ends 3 months after the month of attainment, a total period of 7 months. If he enrolls during the 3 months prior to the month in which he is first eligible, his coverage is effective with the month in which he is first eligible; if he enrolls during the month he is first eligible, his coverage begins the following month; if he enrolls in any of the 3 months after he is first eligible, his coverage begins from 2 to 3 months after enrollment, depending on how long he waited before enrolling.

Beginning with 1969, SMI general enrollment periods are from January 1 through March 31 of each year for those who did not enroll in their initial enrollment period or who previously terminated their enrollment and wish to re-enroll. A person who enrolls during a general enrollment period is covered under SMI beginning with July 1 of the year in which he enrolls. Prior to the 1972 amendments, an eligible individual had to enroll within 3 years after the end of his initial enrollment period or within 3 years after termination of prior enrollment.[23]

A state may enroll eligible aged and disabled individuals who receive cash payments under State supplementary income or State supplementation programs, or are otherwise eligible for medical assistance under Title XIX if: (a) prior to January 1, 1970, the State requested that a State-Federal enrollment agreement be established, and (b) the State pays the necessary premiums.

For a person 65 years and over, enrollment terminates with the beginning of the month following the month of death. For the disabled person, coverage terminates with the end of entitlement to benefits based on disability. For a person with end-stage renal disease, coverage ends 36 months (rather than 12 months as under previous law) after the month in which an individual undergoes kidney transplantation. Otherwise, social security and railroad retirement beneficiaries may give notice of their desire to withdraw from the SMI program at any time; their coverage is terminated at the close of the following calendar quarter. Other enrolled persons may terminate their coverage by withholding payment of premiums or by notifying the Health Care Financing Administration (HCFA) in writing of their desire to withdraw from the program. The beneficiary is provided a 90-day grace period for the payment of overdue premiums after which coverage is automatically terminated. The 1972 amendments extend the 90-day grace period for an additional 90 days when the Secretary finds there is a good cause for failure to pay the premium before the end of the initial 90-day grace period.

[23]The Omnibus Reconciliation Act of 1980 permits Medicare beneficiaries to enroll for SMI at any time and provides for unlimited reenrollment in SMI and HI for those who purchase that protection.

Financing the Program

Hospital Insurance

The hospital insurance program is financed primarily through a tax on a portion of current earnings in employment covered under the Social Security Act. The maximum amount of annual earnings to which the tax is applied began at $6,600 for calendar year 1966; it increased to $7,800 effective with 1968 and $9,000 effective with 1972. The 1972 amendments established an automatic adjustment procedure for determining maximum annual earnings based on rising wages. The maximum earnings amount was $15,300 in 1976, $16,500 in 1977, and $17,700 in 1978.

The same tax rate applies to employees, employers, and self-employed persons. The rate was 0.60 percent for each year 1968-1972. The scheduled rate for 1973 was 1.00 percent, 0.9 percent for 1974-1977, and 1.00 percent for 1978; rates increase for future years up to 1.45 percent for 1986 and thereafter. The proceeds of this tax, and monies collected from the railroad retirement system (with respect to the coverage of railroad retirement beneficiaries) are placed in the Federal hospital insurance trust fund from which reimbursements for all benefits and administrative expenses incurred under the hospital insurance program are made. The hospital insurance trust fund is reimbursed from general tax revenues for the cost of providing coverage for the persons who qualify for hospital insurance under the transitional provisions. Amounts paid for hospital insurance coverage by persons voluntarily paying the premiums are deposited in the hospital insurance trust fund.

Supplementary Medical Insurance

The revenues of the Federal supplementary medical insurance trust funds are derived from premiums paid by those persons enrolled for supplementary medical insurance (or on their behalf), contributions by the Federal Government from general revenues, and interest on funds deposited with the Treasury. Benefits and administrative costs are paid from monies in the SMI trust fund.

The premiums of persons receiving social security cash benefits, railroad retirement, or Federal civil service annuities are deducted from their monthly benefit checks. Persons not receiving monthly benefits are billed quarterly for premiums by the Health Care Financing Administration or the Railroad Retirement Board and have a 90-day grace period in which to make payment. A person is given an additional 90 days to pay the premium when the Secretary finds there is a good cause for failure to pay the premium before the

end of the initial 90-day grace period. Premiums may be paid for as long as a year in advance. For individuals financially unable to make quarterly payments, arrangements can be made for monthly payments.

AMOUNT OF PREMIUM

The Secretary of DHHS is directed by law to determine the SMI premium rate on an annual basis. The dollar amount, prior to the amendments of 1972, was required to be sufficient to produce revenue equal to one-half the expected benefit and administrative costs payable under SMI during the period in which the rate applied. Between 1966 and 1972, the premium increased from $3.00 to $5.80 a month. The 1972 amendments made changes in the method of premium determination. The rate is to be determined in December each year and is applicable for 12 months beginning the following July. It will be increased only in the event of a general cash benefit increase. The percentage increase in the premium in any given year may not exceed the percentage increase in cash benefits. Further, the rate must be determined so that the revenue produced does not exceed, but may be less than, one-half the expected SMI costs. When the premium revenue is less than half the expected SMI costs, the difference is paid by the Federal Government from general revenues. The monthly rate was $7.20 effective July 1976, $7.70 effective July 1977, and $8.20 effective July 1978.

Administration of the Program

Hospital Insurance

Under the HI program, groups or associations of providers, on behalf of their members, may nominate a national, State, or other public or private agency or organization to serve as an intermediary in the claims process. A member of an association is free, however, to receive payment from an approved intermediary other than its association's nominee if approved by the Secretary and agreeable to the intermediary selected. In addition, a provider may deal directly with the Health Care Financing Administration.

The Secretary may enter into an agreement with a nominated organization if he finds this to be consistent with effective and efficient administration of the hospital insurance program. Under the agreement, the intermediary determines the provider's reasonable costs for items and services covered under the program, makes payment, and assists in the application of safeguards against unnecessary use of covered services. The agreement may also call for (1) furnishing consultative services to assist providers to establish and maintain necessary fiscal records and otherwise qualify as providers of services; (2) serving as a center for communicating with providers; and (3) making audits of provider records. Hospital insurance intermediaries also make payments for home health and outpatient hospital services covered under medical insurance.

Under the law, the reasonable costs of services are determined pursuant to regulations established by the Secretary of DHHS. These regulations prescribe the method(s) used to determine costs and the items to be included; they take into account both direct and indirect patient care costs (Code of Federal Regulations, Title 42, 1979). Requests for Medicare payment for covered services generally are submitted by the provider of services; they must be signed by the beneficiary (or someone for him, if he is unable to do so). The provider is reimbursed on the basis of reasonable costs of covered services and bills the beneficiary for deductible and coinsurance amounts as well as for services not covered by the program.

In some instances, hospitals may bill the progam on a physicians' behalf for services rendered to inpatients. In these cases, payment is made by the HI intermediary. For this type of billing, funds are transferred from the SMI trust fund to the HI trust fund to cover the cost of these services.

The intermediary selected by the provider reviews claims for payment and pays the provider. Actual payment for individual claims is made on the basis of an interim rate established between the provider and the intermediary. Final settlement for each provider's operating year is made on the basis of a cost report submitted by the provider, and subject to an independent audit.

No payment can be made to Federal facilities except for emergency services, unless the provider serves as a community institution. In addition, payment cannot be made to a provider for those services it is obligated to render at public expense under Federal law or contract.

Supplementary Medical Insurance

Under the SMI program, the Secretary of DHHS may enter into contracts with carriers for the performance of specified administrative functions. The carrier's principal function is to determine whether charges are allowable (reasonable) and to make payment. Carriers also have the authority and responsibility to determine, in a given case, whether a claim is for a covered service and to deny claims for noncovered or excluded items or services. In addition, carriers are to assist in applying safeguards against unnecessary use of services.

The allowable charge, on which the Medicare SMI payment is based, may not exceed the lowest of (1) the physician's or supplier's customary charge for the service, (2) the prevailing charge in the locality for similar services, or (3) the charge applicable for comparable services under comparable circumstances to the policyholders or subscribers of the carrier. The 1972 amendments provided that increases in the prevailing charge levels would be limited by an economic index furnished by the Health Care Financing Administration to all carriers. The economic index relates physicians' fee increases to increases in physicians' practice expenses and increases in the general earnings level.

Allowable charges are updated annually to take into account the actual charges physicians and suppliers have billed for covered services in the preceding calendar year. The revised allowable charge levels go into effect on July 1 of each year or as soon thereafter as they can be incorporated into the carrier's payment

system. Thus, for the 12-month period beginning July 1, 1975, allowable charge levels were calculated from actual charge levels for calendar year 1974. However, allowable charges may not exceed the upper limit of the prevailing charges set by law at the 75th percentile of customary charges (weighted by frequency) made for similar services.

Claims for payment of SMI benefits may be submitted to the carrier either by the patient or by the physician or other supplier of services. If the patient submits a claim (an itemized bill) directly to the carrier, he receives direct payment of benefits for covered services; he remains responsible for the physician's (or supplier's) bill. The patient may assign the payment for benefits to a physician or other supplier of services who is willing to accept assignment. In this case, the physician (or supplier) agrees that the allowed or reasonable charge determined by the carrier is the total charge. The physician (or supplier) submits the bill and is reimbursed. In this situation, the patient remains responsible for the remaining 20 percent of the allowed charges for covered services and the $60 deductible (effective 1973), if applicable to the current bill.

Services furnished by group practice prepayment plans (GPPPs) to members are normally rendered in return for predetermined premium payments. In these cases Medicare reimbursement is made directly to the GPPP. A GPPP which exercises the option provided by law to be paid 80 percent of the reasonable cost of services (in lieu of 80 percent of the allowed charge for such services) generally deals directly with the Health Care Financing Administration. Plans which choose to be paid on the basis of allowed charges are reimbursed by the SMI carrier.

For bills incurred in the SMI portion of the program after March 1968, claims must be filed no later than the close of the calendar year following the year in which the services are furnished. For services provided during the last 3 months of the calendar year, bills may be submitted through the end of the second year following.

Health Maintenance Organization

The 1972 amendments enabled health maintenance organizations (HMOs) to receive reimbursement from Medicare on a capitation basis for both HI and SMI services. An HMO is an organization which provides to enrolled persons, either directly or by arrangement with others, comprehensive health services on the basis of a periodic rate without regard to the frequency or extent of services furnished to a particular beneficiary. For Medicare purposes, an HMO must provide all of the Medicare covered services generally available in its service area.

Prior to the 1972 amendments, HMO-type plans could be reimbursed under Medicare on a capitation basis only for the costs of providing physicians' and related SMI services. Plans that also provided inpatient hospital, skilled nursing facility, and home health care as covered benefits to their members billed Medicare through intermediaries and carriers on a fee-for-service basis the same as any other provider. Plans that do not choose or cannot qualify to participate under the HMO option may continue to receive Medicare reimbursement on this basis under the group practice prepayment plan (GPPP) regulations.

Plans that do not choose to participate under either HMO or GPPP regulations may continue to bill Medicare, through carriers and intermediaries, for all Medicare covered services provided to their members who are Medicare beneficiaries. The majority of the existing plans are in the category.

Appendix D

The Statistical System of the Medicare Program

The primary objective of the Medicare statistical system is to provide data to measure and evaluate program operation and effectiveness. Benefit payment operations furnish information about the amount and kind of hospital and medical care services used by disabled persons and persons age 65 and over, as well as the expenditures for such services. The applications by hospitals, skilled nursing facilities, home health agencies, independent laboratories, and suppliers of portable X-ray and outpatient physical therapy services to participate in the program, provide data on the characteristics of such providers of services. The claim number assigned to each individual serves as the link between the service used under Medicare and the demographic characteristics of individual beneficiaries.

The Basic Records

The statistical system is based on four related computer records: the health insurance master file, provider record, hospital insurance (Part A) utilization record, and the medical insurance (Part B) payment record.

The Health Insurance Master File

The health insurance master file identifies each aged and disabled person eligible for health insurance benefits and indicates whether he is entitled to hospital insurance benefits, to supplementary medical insurance benefits, or to both. The entitlement record provides the population data for each part of the program which serves as the base for the computation of a variety of utilization rates, limited only by its demographic content.

Provider Record

Every hospital, home health agency, skilled nursing facility, independent clinical laboratory, and supplier of portable X-ray or outpatient physical therapy services must apply for participation in the Medicare program. Data on the application forms are stored in the central provider record and are updated as facilities are recertified periodically, as new ones apply for participation, or as some leave the program. When the information in this provider file is combined with utilization data, it serves to relate the characteristics of facilities and agencies that provide care, to the kinds and amounts of service used by persons insured under Medicare.

Utilization Record for Hospital Insurance

The administration of the hospital insurance (HI) program requires that two items of information be known about each person at the time of his admission to a hospital—his entitlement under the program and the extent to which he has used the benefits available to him.

When a patient is admitted to a hospital, the admission section of the inpatient hospital admission and billing form is completed by the hospital and forwarded through its intermediary to the Health Care Financing Administration's central record. As soon as the record is checked, normally in less than 24 hours, the intermediary is informed of the patient's benefit status and of the number of days of inpatient care to which he is entitled during his current benefit period.

This information is then forwarded to the hospital. At discharge, the hospital completes the billing section of the form and sends it to the intermediary for payment. When payment is approved, the intermediary forwards the claim to the Health Care Financing Administration for inclusion in the central record.

As part of this process, information on diagnoses and surgical procedures is coded for a 20-percent sample of beneficiaries based on specific combinations of digits in the health insurance claim number. Admission and billing forms are handled in a comparable manner by home health agencies and skilled nursing facilities. The outpatient billing form is also transmitted to the Health Care Financing Administration for entry in the central record after the bill is approved for payment by the intermediary.

All the information on utilization experience in hospitals and skilled nursing facilities that is needed to administer the "benefit period" provision is recorded centrally. This information includes stays in certain nonparticipating institutions that meet the definition of a hospital or skilled nursing facility under the law, and days of care not covered or reimbursable under the program.

Each admission and billing form contains both the beneficiary's claim number and the provider's identification number. The resulting record can be readily matched to the beneficiary files and the provider files. By this process, a statistical tape record is created for the sample of insured persons. It contains the information needed for tabulation from the three files related to HI utilization.

Payment Record for Medical Insurance

Payment or reimbursement under the SMI program is made only after receipt by the carriers (intermediaries involved in Part B of the Medicare program) of bills with allowed charges in excess of $60 during a calendar year.

For the enrolled population, carriers need to know from a central source the amount of the deductible that has been met; thereafter, during the remainder of the calendar year, the only additional information required from the Health Care Financing Administration for reimbursement or payment purposes is whether the person is still enrolled under the SMI program.

The administration and operation of the program requires accurate and complete information of the amounts paid by the carriers for physicians' services and for other services and supplies under this part of the program. To meet these needs, carriers furnish a payment record consisting of tape, punched card or other machine-readable form of each bill paid. A bill is defined as a request for payment from or on behalf of a beneficiary as a result of services provided by a single physician or supplier.

Appendix E

Definitions

Age—Age for all persons alive at the end of year is calculated as of July 1 of that year; age of those dying during the year, however, is calculated as of the first day of the month of death.

All Areas—Consists of the United States, Guam, Puerto Rico, Virgin Islands, all other areas, and foreign countries.

All Other Areas—Consists of American Samoa, the Canal Zone, Canton Island, Caroline Islands, Mariana Islands, Marshall Islands, Midway Islands, and Wake Islands.

Amounts Reimbursed—Interim amounts paid under the HI part of the program to participating providers for covered services received by Medicare beneficiaries. Amounts are adjusted at the end of the provider's accounting year based on reasonable costs of operation. There are similar retroactive adjustments for home health and outpatient services covered by SMI. Reimbursements exclude deductibles, copayments, administrative costs, and noncovered services. In addition, reimbursements to group practice prepayment plans dealing directly with the Social Security Administration rather than an intermediary are excluded from this report.

Change in Benefit Status—When disabled beneficiaries attain age 65 they are reclassified as aged persons. If these persons have received reimbursement as both disabled and aged beneficiaries during the year, their reimbursements are aggregated in accordance with the status of the beneficiary at the time the medical service was rendered.

Disability Beneficiaries—Persons under age 65 entitled to cash disability benefits for at least 24 consecutive months and those who are also eligible solely on the basis of end-stage renal disease (ESRD).

Enrollment—Two types of enrollment counts are used in the tables. The first HI or SMI enrollment as of July 1, represents the average annual population and is the base for computing the number of persons served per 1,000 enrolled. The second, persons "ever enrolled" in a year, provides a total count for all persons who were eligible for HI or SMI or both types of services in a year.

By subtracting the number of persons receiving reimbursement from those ever enrolled a count of persons receiving no reimbursement is obtained.

Persons not reimbursed comprised those not using covered services, using covered services for which charges did not exceed the HI or SMI deductible, and using covered services that exceeded either deductible but who did not submit claims.

ESRD, All Ages—Comprises (1) disability beneficiaries under age 65 with ESRD, (2) persons eligible solely on the basis of ESRD, and (3) a small number of persons age 65 and over with ESRD.

Health Insurance for the Aged and Disabled—The program, commonly known as Medicare, that pays for part of the costs of hospital and medical services for participating persons age 65 and over, and certain disability beneficiaries below age 65.

Hospital and/or Supplementary Medical Insurance—All persons age 65 and over who enroll under hospital insurance and/or supplementary medical insurance. This total is larger than the total for hospital insurance because some aged persons are enrolled for medical insurance but not for hospital insurance.

Numbers of Persons Enrolled—Represents those persons enrolled for coverage in the program as of July 1, the mid-point for each calendar year, as shown by information entered in social security records through March of that Year.

Number of Persons Served—Persons are counted once for each covered service used, regardless of the actual number and types of services used. Thus, a person who receives inpatient hospital services and SNF services in a year is counted as receiving both of these services but is counted only once for all services under the HI program.

A person receiving the same service two or more times in a year is counted only once as receiving that service. For example, persons having two or more hospitalizations during a year would be counted only once under inpatient hospital services.

Persons Age 65 and Over—Aged beneficiaries including a small number of persons in this age group who are eligible solely on the basis of chronic end-stage renal disease (ESRD).

Race—White and non-white, or unknown as entered in the HIM file from basic records completed by the primary beneficiary. Race unknown is included in the totals for "all persons" by age and by sex but is now shown separately.

Residence—The State of residence of a beneficiary is determined each year from the residence at the time of the earliest dated bill in that year.

Sex—As designated in the HIM file.

United States—Consists of the 50 States, the District of Columbia, and residence unknown.
